OUR COVER :

For over five decades, HiMedia has been at the forefront of life sciences innovation, built on a strong foundation of scientific innovation. Today, we are extending this legacy into a new era, driven by the convergence of biotechnology and intelligent systems to enhance customer satisfaction.

We are integrating **Artificial Intelligence**, **digital platforms**, and **advanced manufacturing technologies** to enhance precision, scalability, and operational efficiency across the life sciences ecosystem. Solutions such as our **AI-enabled Colony Counter** demonstrate how AI/ML and innovation can transform scientific workflows with greater accuracy and speed.

Beyond individual innovations, we are embedding AI across enterprise systems and expanding the use of **smart robotics** and **automation** in manufacturing and supply chain operations, thus enabling smarter decision-making, improved traceability, and agile future-ready processes.

At HiMedia, we believe in the power of integrating **biotechnology**, **human expertise**, and **AI-driven intelligence** to address future challenges and deliver globally relevant, technology enabled solutions.

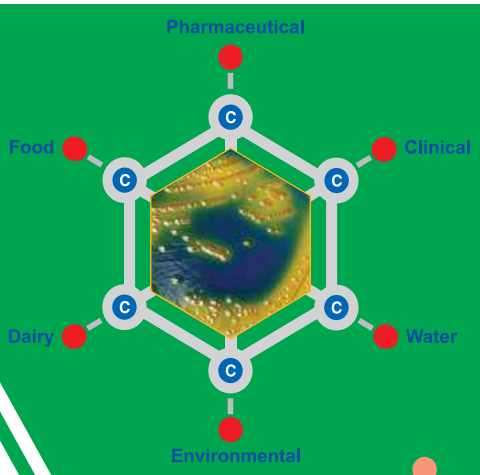
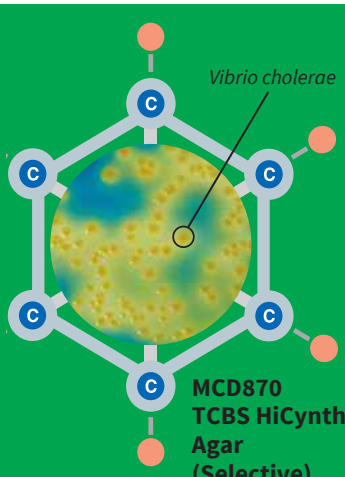
CHEMICALLY DEFINED MEDIA

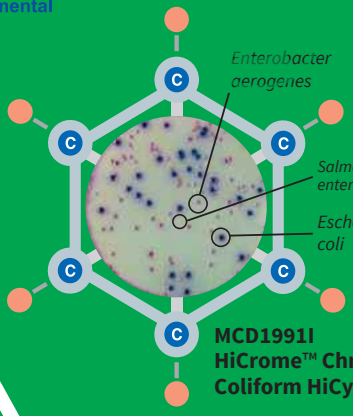
What if your choice can mitigate the safety risks of animal and plant hydrolysates using defined chemical components and ensure consistency.

MiCroBiology®
Understanding Microbes

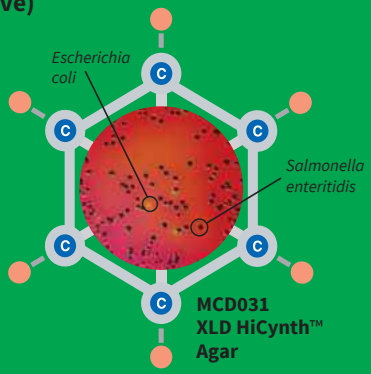




MCD870
TCBS HiCynth™ Agar (Selective)



MCD1991I
HiCrome™ Chromogenic Coliform HiCynth™ Agar



MCD031
XLD HiCynth™ Agar

With newer challenges posed by regulatory bodies, the highly controlled Pharma and Biopharma industry direct their focus on the more defined chemical ingredients. The ***component variability*** in animal and plant hydrolysates can be overcome by the ***component consistency*** of synthetic ingredients. To meet the need of the hour, we have introduced HiCynth®, a complete range of Chemically Defined Microbiology Media.

HiCynth® MEDIA

- Free from Plant and Animal Derivatives
- No worry of KOSHER / HALAL
- Reduced Risk
- Improved Reproducibility
- Increased Consistency
- Comparable Productivity

Lockable Plates

MiCroBiology®
Understanding Microbes

PREPARED PLATES

- Assured sterility by γ-irradiation sterilization process
- Sterile gamma irradiated, triple wrapped, water impermeable packaging
- Primary packing impermeable to H_2O_2
- Lockable plates available
- Barcoded Plates available

FACILITIES

- State-of-the-Art manufacturing facility
- WHO GMP Compliant Clean Zones
- Quality Management Systems ISO 9001:2015, ISO 13485:2016
- Production capacity 1,50,000 plates per day

Ready Prepared Media in Polystyrene Plates

- Ready to use sterile poured plates
- Saves preparation and sterilization time
- Wide range of media in prepared form, to cover needs of microbiologists and pathologists
- Ready to use prepared medium in 90 mm, 100 mm, 120 mm, 150 mm & 200 mm plates - pack of 5 plates
- If required any medium can be available in Triple pack and γ irradiated
- Customization of media available

HiCFU Counter™ C LA1143

Revolutionizing Colony Counting – Fast, Accurate & Automated!

Introducing the HiCFU Counter™ C LA1143

The next-generation automated system for rapid & precise CFU (Colony Forming Unit) determination on agar plates.

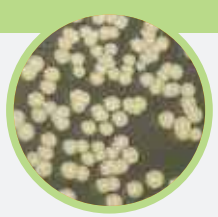
Why Choose HiCFU Counter™ C?

- Automated & High Precision – Eliminates manual counting errors
- Time-Saving & Efficient – Delivers quick & accurate results
- Wide Industry Applications – Ideal for Pharma, Food, Water, Dairy, and Research
- Cost-Effective – Reduces labor costs while increasing reliability
- Essential for Growth Promotion Test (GPT) – Ensures accurate CFU determination in microbiological studies

Upgrade to Automation Today!

- Eliminate manual errors & enhance efficiency
- Improve lab productivity with cutting-edge technology
- Get precise results with minimal effort

Book a Demo & Experience the Difference!



Join the Future of Microbiological Analysis with HiCFU Counter™ C!

Ready Prepared Media in Polystyrene Plates with β Lactamase

Ready prepared β-lactamase plates

- Sterile ready to use agar plates w/ β Lactamase available in 90mm plates & 55mm Scored Plates
- The beta lactamases can efficiently inactivate a range of antibiotics as per their activity, thus finding applications such as,
  1. Inactivation of Penicillin, Cephalosporin of first, second, third & fourth generation and give true bioburden count during environmental studies.
  2. Environmental studies in facilities where presence of Beta lactam antibiotics is suspected.

Anoxomat® III Anaerobic Jar System

MiCroBiology Understanding Microbes

1. Standard Jars
2. Control Unit
   Create custom environment in 1-5 minutes
3. Ergonomic Jars
4. Barcode Scanner & Data Tracker (Optional)
5. Catalyst
   Maintains anaerobic environment for the duration of the incubation
6. Dot and Thermal Printers (Optional)

Faster Result
- Anaerobic, microaerophilic, and custom growth environments established in minutes through automation.

Save Money
- One instrument for multiple environmental conditions
- Low cost of ownership due to low gas consumption and cost per test

Quality Assurance
- Built-in quality tests
- Paper and paperless options
- Plladox® disposable sachets for ideal anaerobic conditions

Reliable Testing
- Confidence in growth of numerous strains of bacteria
- Optimal conditions for consistent bacterial growth

Easy to Use
- Two button start
- Minimal training required

Water The Elixir of Life

For easy detection of pathogens

WATER TESTING KIT (K162)

- Easy detection of *E.coli*, *coliforms* and *non-coliforms* from water samples
- Recommended for 100 ml water sample testing
- Just add your water sample, mix, and incubate
- *Escherichia coli* gives a blue-green to blue colour, coliforms are fluorescent yellow, and non-coliforms are colorless
- Gram-positive organisms are inhibited.

On receipt, all the above products to be stored between 20-30°C.

Ready Prepared Media in Polystyrene BiPlates

- Unique combination of two media on a single biplate
- Ready to use sterile poured biplates
- Saves preparation and sterilization time
- Wide range of media in prepared form to cater to the needs of microbiologists and pathologists
- If required any medium can be made available in different combinations as per users convenience

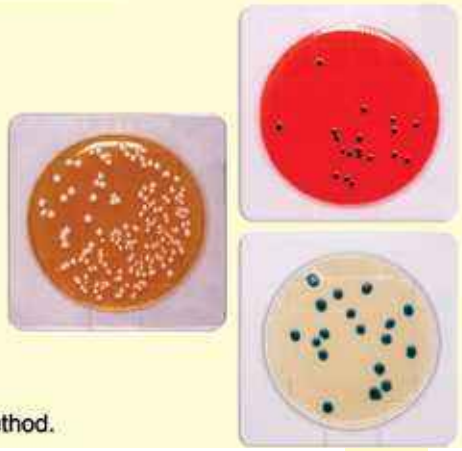
HiTouch® Flexi Plate® series



- Available in 55mm plate size
- Wide range of Flexi plates available for coliforms, Staphylococci, *Pseudomonas*, *Salmonella*, lactic acid bacteria, yeasts and moulds.
- Saves media preparation and sterilization time.
- Easy for direct enumeration, determines exact count of microorganisms.
- Occupies less storage space.
- No additional addition of reagent required.
- Multifunctional use for contact method, sample dilution and moistened swab method.

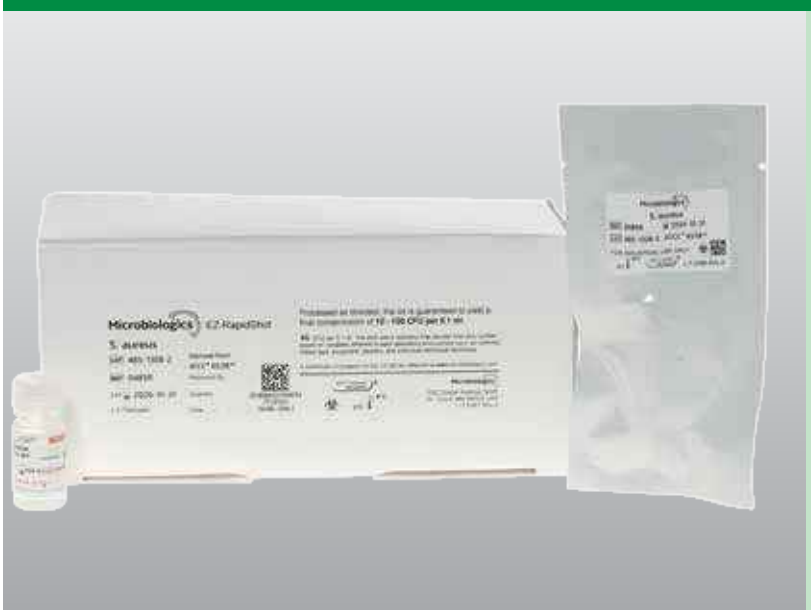
EZ-Rapid Shot Kit



EZ-Rapid Shot - Simplify your Growth Promotion Testing

- Ready to use format of lyophilized cultures and fixed volume of Rehydration fluid
- Time saving and convenient to use, avoid cumbersome steps such serial dilutions
- With Lyophilized cultures in a ready to use format one can avoid extensive culture maintenance activities
- Proven results for recovery on selective media

EZ-Rapid Shot kit include below mentioned based on the pack size

- 10 or 20 vials of a single quantitated microorganism (1 lyophilized pellet per vial)
- 10 or 20 vials of hydrating fluid (1.2 mL in each vial)

On receipt, all the above products to be stored between 2-8°C

Hiaureus™ Coagulase Confirmation Kit (w/swabs) Confirmation of *Staphylococcus aureus* based on coagulase reaction. Kit of 25 tubes containing dehydrated media, suspension fluid along with 25 nos swabs.	K053ADS-1KT	1 Kit	6050

Ready Prepared UTI Diagnostic Kits

- Readily available kit which covers the entire testing protocol
- Media plates for isolation , Octadiscs for sensitivity, and sterile uricol for sample collection
- Testing with 16 different antibiotics with the use of just two octadiscs
- Most Economic and sensitive.
- Effortless testing of the most prevalent UTI Infections.

Ecopathology Uro Kit - I (One kit is sufficient for 5 samples) for diagnosis of Urinary Tract Infection and subsequent antibiotic susceptibility testing. Very economical and rapid diagnostic kit. Kit contains : a) HiCrome® UTI Agar (SM1353) -1x100ml, b)Mueller Hinton Agar (SM173) - 2x100ml, c)Sterile Petri plates(Empty 90 mm) - 15 Nos, d)Octodiscs OD066R - 5 Nos, OD067R - 5 Nos, (Each OD is a combination of 8 different antibiotics), e) Sterile Uricol - 5 Nos.	**K084A-1KT** **K084A-2KT**	**1kit** **2kits**	**1920** **3380**
Ecopathology Uro Kit- I, Modified for isolation and differentiation of Urinary pathogens on the basis of Lactose fermentation subsequent antibiotic susceptibility testing Very economical and rapid diagnostic kit. Kit contains : a) C.L.E.D. Agar w/ Bromothymol Blue (SM792) - 1X100ml, b) Mueller Hinton Agar (SM173) - 2x100ml, c)Sterile Petri plates(Empty 90 mm) - 15 Nos. d)Octodiscs OD066R - 5 Nos, OD067R - 5 Nos, (Each OD is a combination of 8 different antibiotics), e) Sterile Uricol - 5 Nos.	**K084B-1KT** **K084B-2KT**	**1kit** **2kit**	**1865** **3275**
Ecopathology Uro Kit - 2 (One kit is sufficient for 5 samples) for diagnosis of Urinary Tract Infection and subsequent antibiotic susceptibility testing. Very economical and rapid diagnostic kit. Kit contains : a) HiCrome® UTI Agar (SM1353) -1x100ml, b)Mueller Hinton Agar (SM173) - 3x100ml, c)Sterile Petri plates (Empty 90 mm) - 5 Nos, (for SM1353) & 120 mm-10Nos for (SM173) d)Octodiscs OD066 - 5 Nos, OD067-5 Nos, (Each OD is a combination of 8 different antibiotics), e) Sterile Uricol - 5 Nos.	**K085A-1KT** **K085A-2KT**	**1kit** **2kits**	**2570** **4500**

Biochemical Test Kit

Biochemical Kits in accordance with Indian Specifications (IS)

- **Kits designed for identification of Bacterial food pathogens based on biochemical profile**

  Vibrio cholerae and *Vibrio parahaemolyticus* IS 5887 Part V
  Shigella species IS 5887 Part VII
  Salmonella species IS 15187 : 2002 & ISO 6340 : 1995

- **Ready to use, easy to perform biochemicals in the form of biochemical Motility strip, liquid media and slants**

Ready Prepared Biochemical Identification Test Kits

Rapid identification of bacteria upto species level

Inoculate on to the strip, incubate and get the identity of the unknown organism

- Rapid detection of pathogens from food, water and clinical samples
- High degree of accuracy and automation
- Saves labor, time, and minimises manual error

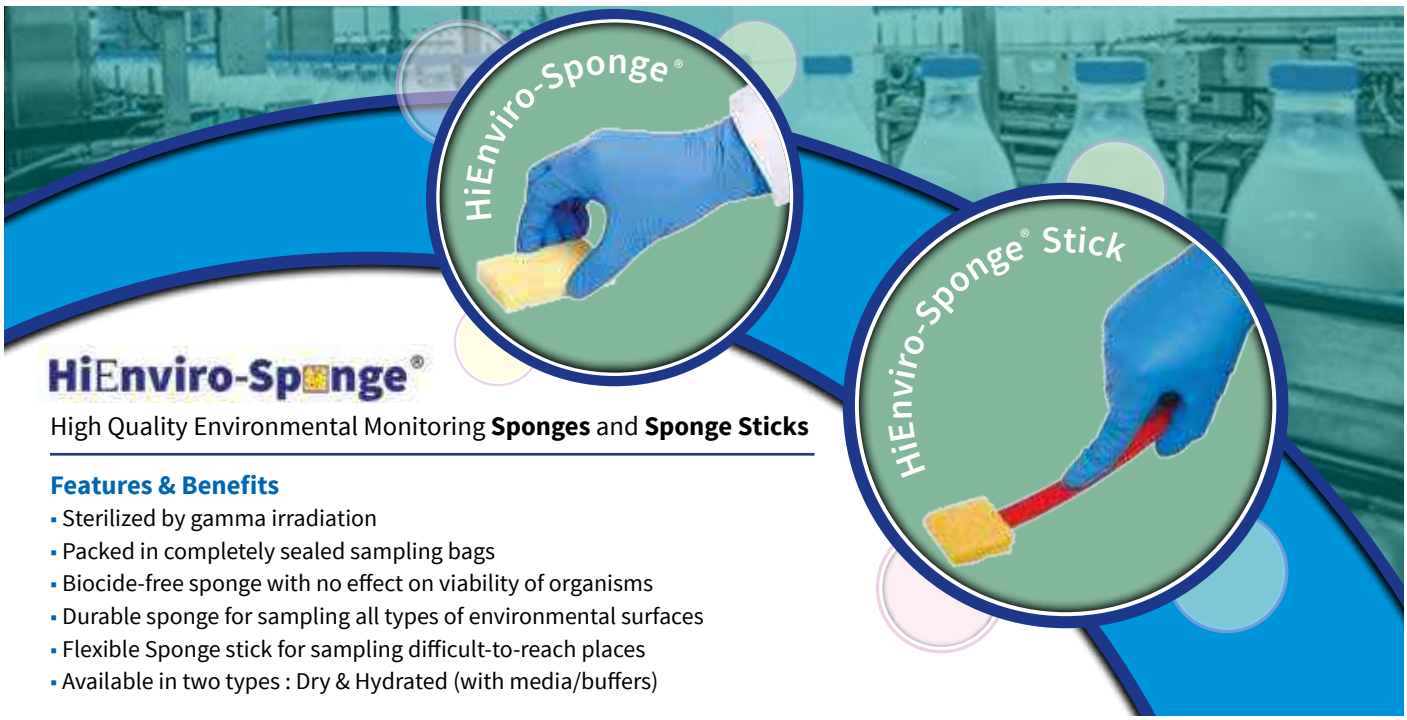
HiEnviro-Sponge® Hydrated for Sample Collection



HiEnviro-Sponge®

High Quality Environmental Monitoring **Sponges** and **Sponge Sticks**

Features & Benefits

- Sterilized by gamma irradiation
- Packed in completely sealed sampling bags
- Biocide-free sponge with no effect on viability of organisms
- Durable sponge for sampling all types of environmental surfaces
- Flexible Sponge stick for sampling difficult-to-reach places
- Available in two types : Dry & Hydrated (with media/buffers)

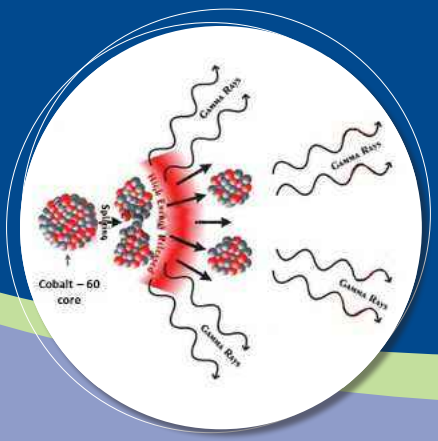
HiMedia's Gamma (γ) Irradiation sterilization facility



- 3 Million Curie Capacity Facility
- ISO 9001:2015 QMS
- WHO-GMP
- A.E.R.B. approved
- B.R.I.T. approved

Unique selling proposition

HiMedia Gamma Irradiation Facility

- Processing data tracked through a Barcode System - from material receipt in the Facility till the dispatch of treated Material
- Dosimeter batch received verified at user end
- Dose Mapping study carried out challenging with B.I.'s
- Efficiency in dose calculation
- Maximum acceptable weight for processing- 50kg per box/drum
- Automated scissor lift for material movement

CULTURE MEDIA BASES

Your perfect choice of media for utilizing raw materials as media ingredients for cultivation of bacteria in small scale and large scale. It is recommended for biomass cultivation required in fermentation studies in various applications; antibiotic manufacturing, enzyme manufacturing, vaccine manufacturing etc.

HiVeg® MEDIA

Reduce millions of tonnes of carbon footprint each year.

HiVeg®
Animal Free Culture Media & Ingredients

Over last two decades, rapid advances in Biotechnology research has given several quality choices to biologists in terms of resources. HiMedia being always a follower of cutting edge research products, it has successfully created a choice of using vegetable peptones over the animal based peptones for your manufacturing and research. We have substituted animal based peptones with HiVeg™ peptones in maximum range of dehydrated culture media. HiVeg® peptones are made from grains and no animal is slaughtered for its production. It is eco-friendly and costs the same as animal based peptones.

100% ANIMAL FREE MEDIA

- Minimizing carbon footprint
- Ecofriendly
- Free from TSE / BSE risks

OUR RANGE INCLUDES

- Standard Pack Size of 500G
- Bulk Packs of 5KG, 10KG, 25KG etc.

ANTIMICROBIALSUSCEPTIBILITY TESTING SYSTEMS

Your perfect choice of AST for in-vitro determination of antibiograms and minimum inhibitory concentration (MIC) of antibiotics against microbes.

It includes Sensitivity Discs, which are available as Single Discs and Multi Discs (combination of antibiotics) - Hexa, Octo, Dodeca and Icosa Discs.

HiMIC™ Plate Kit, HiComb™ MIC Strips, HiComb™ MIC Strips, Modified and Ezy MIC™ Strips to determine MIC of single, dual or multiple antibiotics using simplest technologies detection of microorganisms.

Factors affecting the performance of Sensitivity Discs

Effects of medium components

The quality of the medium plays major role in antimicrobial susceptibility system. Free electrolyte present in the medium can affect sensitivity of few antimicrobial agents. Hence, Mueller Hinton Agar should be monitored to make sure that it contains acceptable concentrations of divalent cations such as Ca^{++} and Mg^{++} as the increased concentration of Ca^{++} and Mg^{++} results in decreased activity of Aminoglycosides and Tetracyclines whereas the decreased concentration of Ca^{++} and Mg^{++} will have the opposite effect.

If Mueller Hinton Agar contains excessive amounts of thymine or thymidine content, they will reversibly inhibit the action of certain antimicrobial agents such as Sulfonamides, Trimethoprim, Trimethoprim-Sulphomethoxazole etc. which gives smaller or less distinct or even no zones and will be misinterpreted as resistant antibiotics. If zone of inhibition of Sulfonamides, Trimethoprim, Trimethoprim-Sulphomethoxazole will be ≤ 20 mm for *E. faecalis* ATCC 29212 can interpret as medium contains high thymine or thymidine content. Mueller Hinton Agar is low in thymine and thymidine content and it can be used successfully to study the susceptibility of antibiotics.

pH of medium

The pH of the prepared medium is one of the important parameter of disc diffusion method. The pH of prepared medium should fall within acceptable range which is 7.2 to 7.4 as per CLSI. If the pH is outside the stated parameters the zone sizes will be altered, with the degree of alteration determined by the antibiotic group.

For e.g. an increase in pH will results in a decrease in Penicillins and Tetracyclines zones and increase in quinolones, macrolids and aminoglycosides zone; conversely, decrease in pH will results in increase in Penicillins and Tetracyclines zones and decrease in quinolones, macrolids and aminoglycosides zone; pH should perform as a part of the routine quality control tests for each batch of medium prepared.

Depth of agar medium in petri plates

For antimicrobial activity, growth rate of the test organism affects the rate of diffusion of the antimicrobial agent. Hence it is advisable to pour the plates on uniform bench to achieve depth of 4 to 5 mm (Usually 70 ml medium for 150 mm Petri plate, 25 to 30 ml medium for 100 mm Petri plate and 20 to 25 ml medium for 90 mm Petri plate). Variation in depth of medium will affect the zone of inhibition which can give false positive or negative results.

For e.g. If the depth of agar is too thin,larger zones will appear as the antimicrobial compound will diffuse further than it should. If the depth of agar is too thick, smaller zones will appear as the diffusion of antimicrobial agent will be restricted.

Inoculum level

The inoculum level is also one of the most important, and variable factors in susceptibility testing, and will have a profound effect on the zone size obtained. The zone edge is determined when the critical mass is achieved. If the inoculum is heavy, then the critical mass will be achieved in a shorter time and the zone will be smaller. If the inoculum is light, the critical mass takes longer to develop, the antibiotic diffuses further and a larger zone is achieved. It is advisable to use a technique which yields a uniform suspension of correct number of organisms i.e. 10^5-10^6 cells/ml. Even if the density of culture is adjusted due to improper inoculation false results could be obtained. Inoculation method includes correct & even swabbing of plates & correct placement of discs.

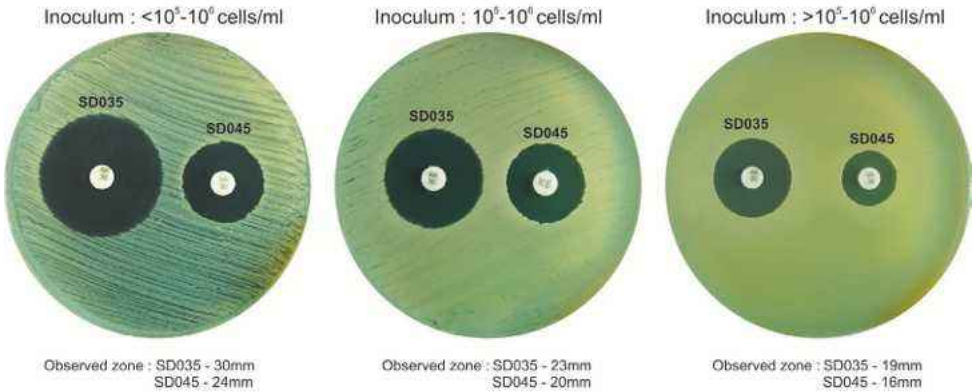
Incubation

Incubation for correct time and correct temperature is also very important parameter. Incubation at temperature above 35°C may fail to detect Methicillin Resistant Staphylococci. At temperatures lower than 35°C, the rate of growth of most bacteria is prolonged; also antimicrobial agents diffuse more slowely. Increased CO_2 atmosphere results in decreased pH, which affects the activity of some antimicrobial agents. The plates should therefore be incubated in ambient air atmosphere unless CO_2 is necessary for the growth of the organisms. Hence, calibration of instruments is a must at all stages.

Disc Storage

The antibiotic discs must be stored according to manufacturer's instructions i.e. between -20°C and +8°C in a sealed, desiccated environment. Cartridges not in use should be stored unopened in their original packaging in order to prevent moisture ingress. This is extremely important since it is well known that moisture is a major cause of antibiotic degradation. Opened cartridges must be refrigerated and sealed in the disc dispenser or other suitable container when not in use. Opened cartridges should not be stored for more than one week; cartridges containing ß-lactamase inhibitors (e.g. clavulanic acid, tazobactam and sulbactam) are particularly susceptible to moisture which may results in degradation of antibiotics.

Effect of Inoculum level



Staphylococcus aureus **ATCC 25923**
Std. zone : SD035 Amikacin 30mcg : 20-26 mm
SD045 Vancomycin 10mcg : 17-21 mm

HiMIC™ Plate Kit

Hassle free Broth Micro dilution Method

Innovation

- Wells are coated with the growth medium
- Wells are deposited with exact gradient of antibiotic
- Accurate evaluation of MIC using indicator based system

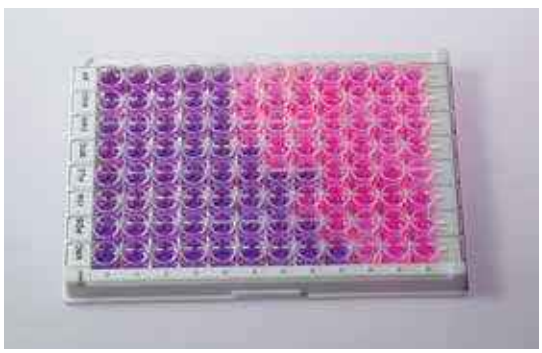
Key Features

- A breakthrough in the evaluation of MIC with ease and accuracy
- Easy breakpoint based visual evaluation
- No instrumentation required
- Interpretation for Sensitive, Intermediate and Resistance as per CLSI & EUCAST guidelines
- 7 concentrations in a single strip covering breakpoint scale
- 12 tests per kit with detachable strips inclusive of diluent, HiMIC™ reading card & separate incubation tray

Multi HiMIC™ Plate Kit

Key Features

- A single plate to determine antibacterial/ antifungal profile.
- **Dodecafungi** : Twelve antibacterial/antifungal agents in a single plate with 7 concentrations.
  Octofungi: Eight antifungal agents with 11 concentrations in a single plate.
- User friendly substitute of traditional broth micro dilution method.
- As per CLSI & EUCAST guidelines.
- Recommended for Bacteria, Yeast and Fungi.



Octofungi 1 HiMIC™ Plate Kit - MPK901

Ezy MIC™ Strips

MIC DETERMINATION STRIPS

Ezy MIC™ Strip is a thin, inert and porous paper strip coated with antibiotic. Both sides of the strip are likewise printed with the MIC reading scale in mcg/ml and the two or three-letter symbol printed on the top of the strip helps in easy identification of the antibiotic. A predefined exponential gradient of antibiotic, dried and stabilized, is immobilized on either sides of the strip with the concentration maximum at one end and minimum at the other. The gradient covers a continuous concentration range across 15 two-fold dilutions of a conventional MIC method.

- Determines the MIC of fastidious, slow-growing or nutritionally deficient micro-organisms, or for a specific type of patient or infection.
- Confirms/ detects a specific resistant phenotype e.g. ESBL, MBL, VISA/ hVISA. AmpC, MRSA, HLAR.
- Detects low levels of resistance.
- Provides high medical value to critical care cases to, refine or guide treatment decisions. Also helps in determining the choice and dosage of antimicrobials in patients with sterile site infections (e.g. endocarditic), severe nosocomial infections, chronic infections (e.g. cystic fibrosis) and immuno suppressed patients.
- Promotes antibiotic stewardship.

Ezy MIC™ Strips Now Available in Individual Packing

- Recommended for determination of Minimum Inhibitory Concentration
- Individual packing helps in easy handling
- Reduces storage space
- CLSI and EUCAST Compliance

HiComb™ MIC Strip, Modified

Gradient based 15 two fold dilutions in a single strip

Effortless & Precise Minimum Inhibitory Concentration (MIC) Determination

- The strip is made up of inert material with 15 extensions that carry porous material at the edges, resembling tooth of comb.
- It covers 15 two-fold dilutions in a single strip having highest concentration at the top and lowest concentration at the bottom.
- Towards the stem of the strip, MIC reading scale in mcg/ml is given along with HiMedia code.
- The gradient remains stable after diffusion, and the zone of inhibition created takes the form of ellipse.
- Quantitative analysis as per EUCAST and CLSI guidelines.

HiComb™ MIC Test

Study 16 concentrations of an antibiotic at one time.

HiComb™ Strip

Easy, Accurate & Fast

Convenient and the most economical test for the assessment of minimum inhibitory concentration (MIC) of antimicrobial agent.

- *HiComb consists of a strip made of an inert material, with 8 extensions that carry the discs of 4 mm, resembling the `tooth` of a comb.*
- *Towards the stem of the strip, MIC reading scale in mcg/ml is given along with the HiMedia code.*
- *A defined concentration of antibiotic is loaded on each of the disc so as to form a gradient when placed on agar plate.*
- *When applied to the agar surface, the antibiotic instantaneously diffuses into the surrounding medium in high to low amounts from one end of the strip to the other.*
- *The gradient remains stable after diffusion, and the zone of inhibition created takes the form of ellipse.*

HIMEDIA®

Antibacterial Agents

Concentration of Antibiotics not as per CLSI (formerly NCCLS) & not as per EUCAST standards

These codes do not have concentration of Antibiotics as per CLSI (formerly NCCLS) & EUCAST standards, However HiMedia provides these concentrations as required by our users. Although zone interpretative criteria for these codes can not be provided, Quality control limits of standard organisms can be made available.

Antimicrobial Susceptibility Testing - Hexa Discs

HiMedia 6-in-one ready antibiotic combination modules
[To be used on 90 mm plates (PW008) or 100 mm plates (PW060)]

HEXA DISCS

Test 6 different antibiotics at once.

HX082 – Hexa G-plus 16

- *HiMedia`s Hexa discs are enhanced extensions of Single Discs. These series of discs gives the privilege to study 6 antibiotics on a single plate.*
- *These are flat circular rings, made of inert material w/ 6 equidistant arms on the outer periphery w/ a 6 mm filter paper disc at the end.*
- *These discs placed at a distance of 24 mm apart from each other are impregnated with 6 different antibiotics, w/ corresponding symbols & concentrations printed on the ring. The antibiotic impregnated discs function as individual antibiotic susceptibility discs, generating precise circular zones of inhibition for measurement of the zone diameter with minimal merging.*
- *The unique inert material used for making the rings allows faster absorption of the rings and hence a uniform diffusion of the antibiotics on to the medium.*
- *The discs are available in various pre-selected combinations of 6 antibiotics. However rings can be made as per individual customized specification.*
- *These discs are to be used on 100 mm plates like PW060/ 90mm plates like PW001/8. Also available are ready prepared media plates of Mueller Hinton Agar (90 mm) (MP173/MP1084) and Mueller Hinton Agar (100 mm) (MP173C) .*

For accurate measurement of Zone

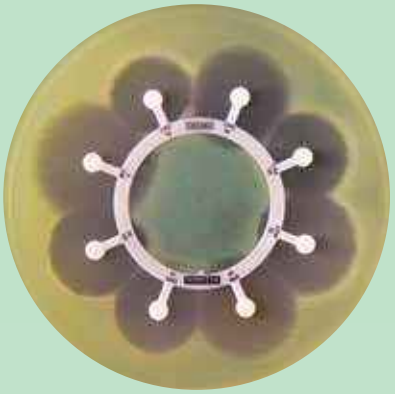
OCTO DISCS

Test 8 different antibiotics in one shot

- *Available in two different sizes, HiMedia`s Octo Discs will help in testing 8 different antibiotics in one shot.*
- *These are flat circular rings, made of inert material w/ 8 equidistant arms on the outer periphery w/ a 6 mm filter paper disc at the end Available in 2 sizes, the smaller size can be used on 90 mm plates, whereas the bigger sizes are to be used on 120 mm plates.*
- *For the bigger size rings, the discs placed at a distance of 24 mm apart from each other are impregnated w/ 8 different antibiotics, w/ corresponding symbols & concentrations printed on the ring. The antibiotic impregnated discs function as individual antibiotic susceptibility discs, generating precise circular zones of inhibition for measurement of the zone diameter with minimal merging.*
- *However for smaller rings, the distance between the two discs is lesser than 24 mm which might lead to merging of zones.*
- *The unique inert material used for making the rings allows faster absorption of the rings and hence a uniform diffusion of the antibiotics on to the medium.*
- *The discs are available in various pre-selected combinations of 8 antibiotics. Also rings can be made as per individual customized specification.*
- *The smaller size rings are to be used on 100 mm plates like PW060 or on 90mm plates like PW001, PW008. Also available are ready prepared media plates of Mueller Hinton Agar (90 mm) (MP173/MP1084) and Mueller Hinton Agar (100 mm) (MP173C).*
- *For the bigger size rings, 120 mm plates like PW1146 are to be used. Also available are ready prepared media plates of Mueller Hinton Agar (120 mm) (MP173M).*



OD282 when tested with *Pseudomonas aeruginosa* ATCC 27853 gives clear unmerged zones.

OD282R when tested with *Pseudomonas aeruginosa* ATCC 27853 gives clear but merged zones.

DODECA DISCS

12 different antibiotics, for testing on a single 150 mm plate

- *HiMedia`s Dodeca discs are enhanced extensions of Single Discs. These series of discs gives the privilege to study 12 antibiotics on a single plate.*
- *These are flat circular rings, made of inert material w/ 8 & 4 equidistant arms on the outer & inner periphery respectively w/ a 6 mm filter paper disc at the end.*
- *These discs are placed at a distance of 24 mm from each other.*
- *These discs are impregnated w/ 12 different antibiotics, w/ corresponding symbols & concentrations printed on the ring. The antibiotic impregnated discs function as individual antibiotic susceptibility discs, generating precise circular zones of inhibition for measurement of the zone diameter with minimal merging.*
- *The unique inert material used for making the rings aids in quicker absorption of the rings and hence a proper diffusion of the antibiotics on to the medium.*
- *The discs are available in various pre-selected combinations of 12 antibiotics. However rings can also be made as per individual customized specification.*
- *These discs are to be used on 150 mm plates like PW011. Also available are ready prepared media plates of Mueller Hinton Agar (150 mm) (MP173L).*

ICOSA DISCS

Test 20 different antibiotics in one shot - efficiently, easily and rapidly.

- *HiMedia`s Icosa discs are enhanced extensions of Single Discs. These series of discs gives the privilege to study 20 antibiotics at one time.*
- *These are flat circular rings, made of inert material w/ 12 & 8 equidistant arms on the outer & inner periphery respectively w/ a 6 mm filter paper disc at the end.*
- *These discs are impregnated w/ different antibiotics, w/ corresponding symbols & concentrations printed on the ring The antibiotic impregnated discs function as individual antibiotic susceptibility discs, generating precise circular zones of inhibition for measurement of the zone diameter.*
- *Moreover the discs are designed in such a way that each antibiotic disc on a single ring is atleast 24 mm apart from the others, thus reducing the merging of zones.*
- *The unique inert material used for making the rings enhances the absorption of the ring and hence a proper diffusion of the antibiotics on to the medium.*
- *The discs are available in various pre-selected combinations of 20 antibiotics. But rings can be made as per individual customized specification.*
- *These discs are to be used on 200 mm plates like PW010. Also available are ready prepared media plates of Mueller Hinton Agar (200 mm) (MP173XL).*

: Isolates of *C.krusei* are assumed to be intrinsically resistant to Fluconazole. The results of Fluconazole susceptibility testing should not be interpreted using this criterion for this species.

: For Itraconazole, the data are based entirely on experience with mucosal infections, and data supporting breakpoints for invasive infections due to Candida spp. is not available.
b : For Flucytosine, RPMI 1640 agar w/ MOPS & 2% Glucose w/o Sodium Bicarbonate is to be recommended.

** : *C. krusei* ATCC 6258 is now known as *Issatchenkia orientalis* ATCC 6258.

a : Limits may not match with CLSI guidelines.

MIQNAF® (Nafithromycin)

A 'New Generation' Clinically Proven Novel Macrolide Antibiotic for the Management of Contemporary CABP Patients

- Dose regimen: **800 mg, once-daily x 3 days**
- Efficacy- and safety-assured monotherapy for community-acquired bacterial pneumonia (CABP) in outpatients
- For treatment of adults (≥18 years) with CABP caused by *S. pneumoniae*, *Haemophilus*, *Moraxella*, *S. aureus* and atypicals
- Comprehensive coverage of both typical & atypical community respiratory pathogens
- Activity against resistant pathogens

Stains play an important role in morphological determination of micro organisms which is a preliminary step used by microbiologist to identify pathogens.

HiMedia offers vast array and valuable cost effective, ready-to-use stains and staining kits for microbiological/ pathological laboratories, hospitals, research settings and educational institutes. These stains augment tissue morphology, demonstrate important cellular components, aid in the evaluation of diseases, and identifies pathogenic organisms. Thus it is an important tool used by pathologists to often guide patient's treatment.

HiDtect™ Rapid Identification Disc

HiMedia has always been in frontline in finding solutions to the existing challenges in the field of microbiology and this urge has helped in the development of a wide range of products.

Latest and economical range of diagnostic product HiDtect™ Rapid Identification Disc has been developed which helps in direct identification of microorganisms from clinical samples, water samples, food samples, environment etc.

HiMedias new range of HiDtect™ Rapid Identification Discs is simple to perform. It eliminates the use of Selective Medias and further study elaborate biochemical tests.

Around twenty such unique discs are developed (DT001 to DT020) which finds application in various sectors of Food & Dairy industry, Water industry, Pharmaceuticals Laboratory Testing, Cosmetics industry, Environmental & Sanitary Testing, Clinical Diagnosis etc.

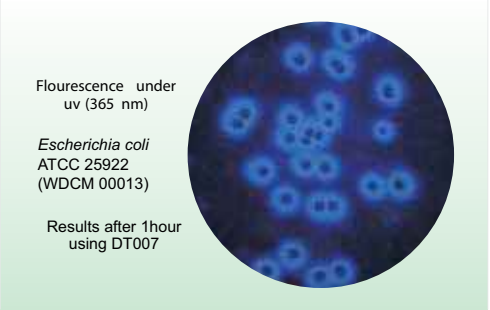
In either fields it involves the use of Enriched and Selective medias. The isolate is often presumptively identified morphologically by special staining methods and plated out on diagnostic medias. Further elaborate biochemical tests are done for confirmation of isolate recovered. Overall the whole procedure is time consuming, expensive and laborious. Hence there is continuous search for a technology that could aid in rapid, reliable, simple and economical diagnosis worldwide.

HiDtect™ Rapid Identification Discs have been developed which enables rapid and reliable detection of microorganisms.

It can detect metabolic activity as DNase activity of bacteria; useful for identification of pathogenic Staphylococci (DT004), identify pathogens causing UTI (DT001), study esculin hydrolysis and identify Group D Streptococci from food and pharmaceutical products (DT014). Discs identifying bacterias as *Salmonella* (DT002), *Pseudomonas* (DT003), *Bacillus* (DT011) *E.coli* and total coliforms (DT012 and DT013) also form part of HiDtect™ Rapid Identification Discs. On basis of Lactose Fermentation and Non lactose fermentation DT009 Discs detects *Enterobacteriaceae* and gram negative bacteria.

Ability to ferment sugars as Glucose (DT016), Lactose (DT017), Mannitol (DT018), Xylose (DT019), Sucrose (DT020) and characteristion of organisms can be studied within 1-4 hours using these discs. Besides these the organisms can be detected from environment (DT015), pathogens detected from foods (DT010) and microbial limit test organisms detected in pharmaceutical preparations using Universal Test Disc (DT005).

Detection of *E.coli* from water and food samples can be done using DT006, DT007, DT008 discs. HiDtect™ UTI identification Disc (DT001) helps identifying causing urinary tract infections, HiDtect™ Bacillus Identification disc (DT011) is also available for differentiation and identification of *Bacillus* from mixed cultures.



A method of detecting target organisms comprises following steps:

Step I Inoculation, Isolation and Incubation

Step II Replication and Identification

Testing method

It involves routine inoculating and isolation technique followed by replication and direct identification

Step I

Inoculate the organisms from sample on any of general purpose media, Nutrient Agar, Soyabean Casein Digest Agar, Plate Count Agar etc.

Adopt any of surface plating methods as; Spread Plate Method, Quadrant (four or five) streak pattern or T streak method so as to obtain isolated colonies from inoculums. Incubate at 35-37°C for 18-24 hours.

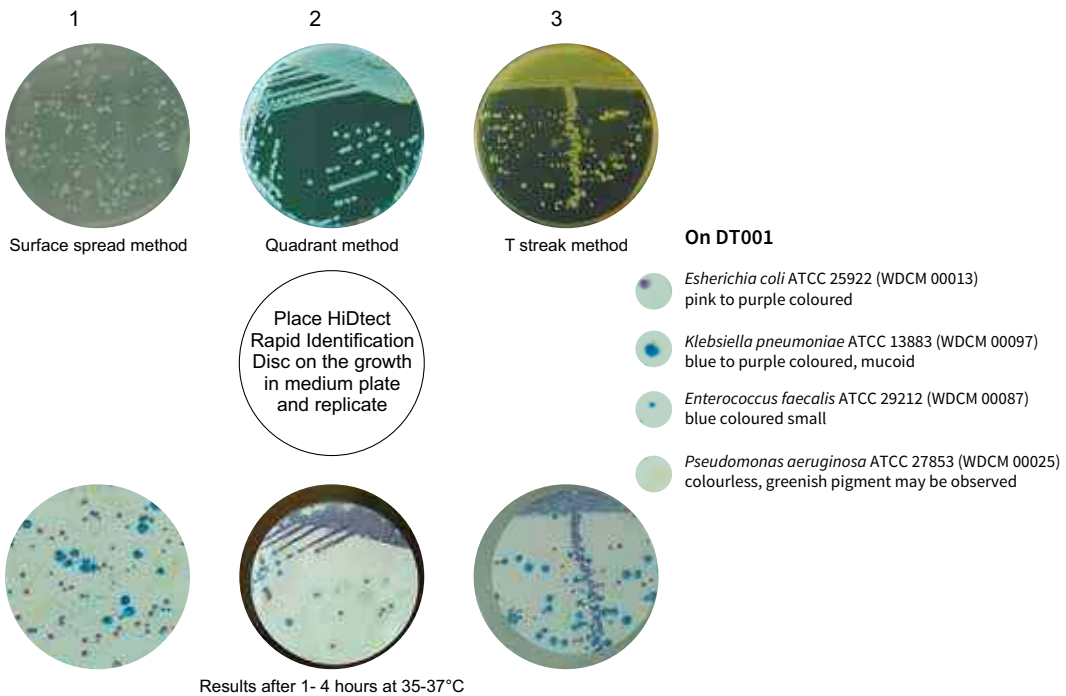
Check for bacterial growth

Step II

Place the HiDtect™ Rapid Identification disc of choice (suspected organisms) on the surface of Agar plate. Perform this step for maximum of 30 seconds. Mark the corresponding orientation of paper. This is replication technique.

Incubate the replicated identification disc in empty sterile petridish at 35-37°C for 1-4 hours. Alternately the disc may be kept for incubation on growth media at 35-37°C for 1-4 hours.

Observe for development of colour and interpret results.



HiDtect™ Rapid Identification Disc

- Economical, Convenient, Rapid and Reliable test for confirmation of bacteria
- Beneficial to Clinical, Food & Meat industry, Dairy, Water, Pharmaceutical, Environmental and Cosmetic industry
- Direct application without any preparations, Results in just 1-4 hours.

India's Original Research Product to Tackle MDR/XDR Gram-Negative Pathogens

- Novel β-lactam Enhancer based Mechanism of Action
- Rapid bactericidal activity through dual PBP targeting
- Broadest ever coverage spectrum
- Freedom from β-lactamase inhibition
- Overcomes non-enzymatic resistance
- Anti-Biofilm action

- Active against carbapenem resistant (including MBL producing)
  - ✓ *Enterobacterales*
    - ✓ *E.coli* (NDM + PBP3 insert, OXA-48-like)
    - ✓ *Klebsiella pneumoniae* (NDM, KPC, OXA-48-like, NDM + OXA-48-like)
  - ✓ *Pseudomonas aeruginosa* (NDM + efflux + porin loss)
  - ✓ *Acinetobacter* Spp. (OXA-carbapenemases)
  - ✓ MDR *Stenotrophomonas* Spp
- Coverage of all the carbapenem-resistance mechanisms in above pathogens
- Safety in diverse patient population
- High lung penetration & vascular concentrations

- Global Phase-3 cUTI: 89.0% vs 68.4% (vs meropenem)
- India Phase-2 against carbapenem resistant Gram-negative infections: 91.7% cure rate

ATCC Microbiology and allied products, services and standards

Products

Collections : ATCC's collections include a wide range of biological materials for research, including cell lines, molecular genomics tools, microorganisms, and bioproducts.

Focus area : ATCC offers a wide assortment of cell cultures, microbial strains, and molecular tools to support your research in a variety of focus areas, such as disease mechanisms, quality control testing, product development, and environmental research.

Disease / Model : ATCC offers a wide assortment of cell cultures and microbial strains to support disease-based research in several key areas, such as cancer research and infectious disease.

Microbial Panels : ATCC Microbial Panels enable faster, more intelligent choices when selecting cultures for microbial-based disease research. Each panel is comprised of ATCC Genuine Cultures grouped together based on their utility in research related to infectious disease, antibiotic-resistance mechanisms, food and environmental testing, and population studies. Cultures included in each panel are further characterized by ATCC for relevant strain traits.

Ready to use : ATCC Minis - QC Strains

Bacteria : Cultures from the ATCC Bacteriology Collection are useful in a variety of research and industrial applications, and include methicillin-resistant/sensitive research materials, quality control organisms for commercial identification systems, a wide selection of extremophile strains from a variety of environmental sources, and genomic DNA from well-characterized microbial strains suitable for amplification by PCR.

Fungi and Yeast : ATCC is a trusted resource center housing a diverse assortment of filamentous fungi and yeasts, representing over 7,600 species. The collection offers over 32,000 yeast genetic strains, including the historic Yeast Genetic Stock Center (YGSC) strains, the open reading frame (ORF) deletion strains of the *Saccharomyces cerevisiae* Genome Deletion Project (SGDP), and a collection of *Cryptococcus neoformans* ORF deletion strains.

Drug Resistant Bacteria: ATCC provides an expanding collection of clinically relevant, antimicrobial-resistant strains. Each multidrug-resistant strain delivers expanded levels of source metadata and genomic characterization, creating essential tools for all stages of the discovery and development process for novel antimicrobials and therapeutics, molecular-based detection assays, and updated sterility protocols.

ATCC Licensing Information : ATCC page provides FAQ's related to Material Transfer Agreements at ATCC along with the ability to request a transfer, report a transfer or submit a new inquiry to our Licensing team.

Commercial Use : The licensing program for commercial use of ATCC products and use of the MTA for ATCC products in research both help protect the ability of ATCC to supply reference standards for the benefit of the scientific community.

Research Use : The ATCC Material Transfer Agreement (MTA) explains the rights and responsibilities of end users' use of ATCC materials. For your convenience, we have provided answers to FAQs in our database and these can also be found through the general site search.

Search FAQs with QR code : If you find that your question regarding the MTA is not answered, please contact us at contacts@atcc.org with your specific inquiry.

Sourced Directly from ATCC !!!

Precisely Quantified Bacteria and Fungi

MicroQuant™

Precision in Every Pellet, Trust in Every Test

Ideal for Growth Promotion Test (GPT)

Features of MicroQuant™

MicroQuant™ by ATCC is a new product line of precisely quantitated microbial reference materials used to streamline microbial quality control (QC) testing in pharmaceutical manufacturing. **Sourced directly from ATCC**, this innovative solution delivers precision and reliability you can trust, without the complexity of traditional microbial QC testing.

- **Precisely quantitated:** Available in low-titer (100-1000 CFU/pellet) and high-titer (10^7-10^8 CFU/pellet) formats.
- **Single-use format:** Highly convenient ready-to-use format enables fast assay set up while minimizing handling.
- **Immediate rehydration at room temperature:** With a processing time of ~1 minute, you can reduce your hands-on time while improving efficiency.
- **Convenient storage at 2-8°C:** Refrigerator-stable for up to 6 months, making them easy to store and ready to use anytime—no need to thaw.
- **Reliable:** Manufactured by ATCC under an ISO 17034–accredited process, so you can trust that you are receiving high-quality, original source material.

Streamlined for Success

Leveraging an innovative cryopreservation technology, MicroQuant™ products come in the form of stable, rapidly rehydrating pellets that deliver consistent quantitation and accurate, reproducible results—addressing the key challenges faced by microbial testing laboratories. This novel product suite enables simplified workflows and quick turnaround times while adhering to strict quality standards.

With MicroQuant™, you can execute accurate and reproducible microbial QC testing in a fraction of the time, saving resources and streamlining workflows.

The MicroQuant™ Workflow (takes only minutes to complete)

ATCC® MicroQuant™ products

ATCC® No.	Description	Quantitation (CFU/vial)	Availability
16404-LQ-PACK™	MicroQuant™ Aspergillus brasiliensis, low CFU	100-1,000	Available now
16404-HQ-PACK™	MicroQuant™ Aspergillus brasiliensis, high CFU	10^7-10^8	Available now
6633-LQ-PACK™	MicroQuant™ Bacillus spizizenii, low CFU	100-1,000	Available now
6633-HQ-PACK™	MicroQuant™ Bacillus spizizenii, high CFU	10^7-10^8	Available now
BAA-245-LQ-PACK™	MicroQuant™ Burkholderia cenocepacia, low CFU	100-1,000	Available now
BAA-245-HQ-PACK™	MicroQuant™ Burkholderia cenocepacia, high CFU	10^7-10^8	Available now
25416-LQ-PACK™	MicroQuant™ Burkholderia cepacia, low CFU	100-1,000	Available now
25416-HQ-PACK™	MicroQuant™ Burkholderia cepacia, high CFU	10^7-10^8	Available now
BAA-247-LQ-PACK™	MicroQuant™ Burkholderia multivorans, low CFU	100-1,000	Available now
BAA-247-HQ-PACK™	MicroQuant™ Burkholderia multivorans, high CFU	10^7-10^8	Available now
10231-LQ-PACK™	MicroQuant™ Candida albicans, low CFU	100-1,000	Available now
10231-HQ-PACK™	MicroQuant™ Candida albicans, high CFU	10^7-10^8	Available now
11437-LQ-PACK™	MicroQuant™ Clostridium sporogenes, low CFU	100-1,000	Available now
19404-LQ-PACK™	MicroQuant™ Clostridium sporogenes, low CFU	100-1,000	Available now
19404-HQ-PACK™	MicroQuant™ Clostridium sporogenes, high CFU	10^7-10^8	Available now
11827-LQ-PACK™	MicroQuant™ Cutibacterium acnes, low CFU	100-1,000	Available now
8739-LQ-PACK™	MicroQuant™ Escherichia coli, low CFU	100-1,000	Available now
8739-HQ-PACK™	MicroQuant™ Escherichia coli, high CFU	10^7-10^8	Available now
9027-LQ-PACK™	MicroQuant™ Pseudomonas paraeruginosa, low CFU	100-1,000	Available now
9027-HQ-PACK™	MicroQuant™ Pseudomonas paraeruginosa, high CFU	10^7-10^8	Available now
14028-LQ-PACK™	MicroQuant™ Salmonella enterica, low CFU	100-1,000	Available now
14028-HQ-PACK™	MicroQuant™ Salmonella enterica, high CFU	10^7-10^8	Available now
6538-LQ-PACK™	MicroQuant™ Staphylococcus aureus subsp. aureus, low CFU	100-1,000	Available now

Quality Control Solutions for Food Testing

ATCC® offers an expanding portfolio of quality control products to ensure the accuracy and reliability of your food safety programs. Through the development of customer-driven products, ATCC is making it easier for food manufacturers, processors, and contract testing laboratories to ensure the safety of consumable goods in accordance with FDA, the Food Safety Modernization Act, and food testing accreditation. Choose from among a variety of ATCC Quality Control Solutions, including:

- ATCC Reference Strains – including those cited in published laboratory methods
- ATCC Genuine Nucleics supporting the development and validation of rapid microbial methods
- ATCC Reporter-labeled Strains – including the USDA-cited GFP-labeled *Escherichia coli* O157

Trust ATCC Quality Control Solutions for accuracy, reliability, and the reproducibility needed to maintain outstanding food safety programs!

ATCC Food Testing Reference Strains

The validity of any microbial-based assay is dependent upon minimally passaged, fully characterized control organisms. One of our top priorities at ATCC is to provide high-quality reference strains for use in the routine testing of food products. Each ATCC reference strain is backed by meticulous laboratory procedures that ensure viability, identity, functionality, and purity, not only for our master seed stocks, but also for every distribution lot that we ship to your lab.

ATCC reference strains are frequently cited in published laboratory methods used by industry (see page 6 for details), and include a variety of cultures frequently associated with foodborne illness, such as:

- *Campylobacter* spp.
- *Escherichia coli*
- *Listeria monocytogenes*
- *Chronobacter sakazakii*
- *Bacillus* spp.
- *Salmonella enterica*
- *Shigella* spp.
- And more!

Salmonella is one of the leading causes of foodborne illness in the United States

Don't take chances on the quality of your cultures. Insist on products that meet ATCC's world-renowned standards for high quality and safety. Visit our Food Testing page at www.atcc.org/Food to learn more!

ATCC® Minis – making it easy for you to ensure the accuracy of your assays

ATCC Minis are the same ATCC Genuine Cultures you've come to trust for your quality control assays, now offered in a convenient, single-use, "mini" format that allows you to get your assays moving faster.

- Put an end to do-it-yourself banking with each six-pack of ready-to-use quality control strains in glycerol stock
- Enjoy using the same ATCC strains you've come to trust with easy-to-open screw-cap tubes
- Make recordkeeping a snap with peel-off labels you can stick directly into your lab notebook
- Conveniently store your strains up to one year at -20°C*

It's easy to ensure the quality of your products with ATCC Minis – just open, plate, and go! Visit us online at www.atcc.org/minis to learn more.

*Some fastidious strains are not stable at -20°C. Please refer to the product sheet for an item's appropriate storage temperature.

ATCC microbial panels – taking the guesswork out of validation studies

ATCC Microbial panels enable faster, more intelligent choices when selecting cultures for microbial-based disease research, including the development of novel detection methods for *Salmonella enterica*, Big-six non-O157 Shiga toxin-producing *Escherichia coli* (STEC), and enteric protozoa. Find your ATCC Microbial Panel for food testing online at www.atcc.org/mp.

ATCC®	Description	Application
MP-4™	*Clostridioides difficile* Panel	Building and testing new methods to detect *Clostridioides difficile* toxinotypes
MP-9™	Big-Six *Escherichia coli* Strains Panel	Quality control assays for non-O157 Shiga toxin-producing *Escherichia coli* (STEC)
MP-10™	Big-Six *Escherichia coli* Genomic DNA Panel	Quality control assays for non-O157 Shiga toxin-producing *Escherichia coli* (STEC)
MP-14™	*Enteric Protozoa* Genomic DNA Panel	Development of molecular-based assays used to diagnose intestinal disease caused by clinically relevant protozoa
MP-15™	*Salmonella enterica* Panel	Quality control assays for *Salmonella enterica* subsp. enterica serovars commonly associated with contaminated food or water
MP-20™	Big-Six Non-Toxigenic *Escherichia coli* Strains Panel	Non-toxigenic quality control strains for research on the Big-Six non-O157 serogroups
MP-26™	Non-pathogenic *Escherichia coli* Surrogates Indicators Panel	Validation applications include beef carcass intervention, beef processing, and selected antimicrobial treatments for *E. coli* O157:H7 or *Salmonella enterica*

ATCC reference strains used in the quality control of media

ATCC is dedicated to the continual improvement and diversification of our collection of food testing reference materials. To this end, we are constantly improving the technology used to characterize and authenticate the materials in our portfolio.
Only ATCC delivers high quality microorganisms for food testing applications that are authenticated through a polyphasic approach incorporating genotypic, phenotypic, proteotypic, and functional analyses, including:

- Antibiotic susceptibility testing
- Biochemical analyses
- ELISA
- Immunofluorescence
- Morphological analyses
- Sterility testing
- Phenotypic microarray
- Sequencing
- Serotyping
- Toxinotyping
- Viability testing
- VITEK® MS

The high quality nature of our products makes them ideal for use as QC organisms for ensuring the quality and functionality of culture media frequently used in food testing assays, including:

Organism	Selective Media	Quality Control Strains
Bacillus cereus	Mannitol-Egg Yolk-Polymyxin (MYP) Agar	*Bacillus cereus* (ATCC® 11778™), *B. cereus* (ATCC® 14579™), *B. megaterium* (ATCC® 14581™), *B. circulans* (ATCC® 61™), *B. subtilis* (ATCC® 6633™)
Campylobacter	Campylobacter Blood-free Selective Medium (CCDA)	*Campylobacter jejuni* (ATCC® 33291™), *C. jejuni* (ATCC® 33292™), *C. coli* (ATCC® 43478™), *Escherichia coli* (ATCC® 25922™)
Escherichia coli O157:H7	CHROMagar™ O157	*Escherichia coli* O157:H7 (ATCC® 43888™), *E. coli* (ATCC® 25922™), *E. coli* (ATCC® 13047™), *Enterococcus faecalis* (ATCC® 29212™)
Listeria	PALCAM Agar	*Escherichia coli* (ATCC® 25922™), *Enterococcus faecalis* (ATCC® 29212™) *Listeria monocytogenes* (ATCC® 7644™), *L. monocytogenes* (ATCC® 19114™), *L. monocytogenes* (ATCC® 19116™), *Staphylococcus aureus* subsp. *aureus* (ATCC® 25923™)
Salmonella	Salmonella-Shigella (SS) Agar Bismuth Sulfite (BS) Agar	*Salmonella enterica* (ATCC® 14028™), *Shigella flexneri* (ATCC® 12022™), *Escherichia coli* (ATCC® 25922™), *Enterococcus faecalis* (ATCC® 29212™)
Staphylococcus aureus	Baird Parker Agar	*Staphylococcus aureus* subsp. *aureus* (ATCC® 25923™), *S. aureus* subsp. *aureus* (ATCC® 29213™), *S. epidermidis* (ATCC® 12228™)
Vibrio	Thiosulfate Citrate Bile Salts Sucrose (TCBS) Agar	*Vibrio parahaemolyticus* (ATCC® 17802™), *Escherichia coli* (ATCC® 25922™), *Proteus mirabilis* (ATCC® 12453™)

Microbiome Research

Optimize your research with the right controls

The complexities associated with microbiome research have made assay standardization challenging. ATCC has the solution: microbiome standards. Throughout each stage of your workflow, ATCC® Microbiome Standards enable you to optimize your diverse research applications with confidence and improve the consistency and reproducibility of your data run after run. These standards support a broad array of applications ranging from method optimization to data interpretation, and they serve as superior controls for microbial community testing and assay development on any platform.

ATCC Resources and Services

Culture Guides

Culturing biological materials can be challenging at times even for the expert culturist. With nearly a century of expertise with cell and microbial cultures, ATCC has acquired and developed a vast body of best practices to aid researchers at all levels of proficiency to maximize the return on their biomaterials investment. The guides below deliver that knowledge and insight to the end user in a portable, easy-to-follow format.

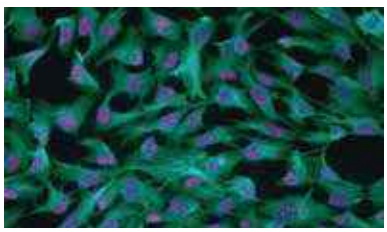
cGMP Cell Banking and Biorepository



For nearly a century, ATCC has been regarded as a pioneer in cell banking and storage, using the most reliable and standardized procedures and equipment to manufacture and preserve your critical biomaterials. ATCC supports multiple stages of the cell banking process, from initial development to master/working cell bank production runs in efforts to streamline and expedite your timelines. In tandem, our cGMP biorepository experts can characterize, package, store, and distribute your biological materials to ensure the security and integrity of your cell banks.

Packing Information

Individual Lyophilized Microorganisms

LYFO DISK® Vials
A vial of 6 lyophilized pellets.
Order by the catalog number with the suffix "L".

KWIK-STIK™ Duopaks
Duopaks include 2 KWIK-STIKS™
Order by the catalog number with the suffix "P".

Other Products

EZ-CFU™
Available in kits containing: 20 lyophilized pellets of a single quantitative QC microorganism, 10 vials of hydrating fluid (2 ml in each vial), Delivering 10-100 cfu per 0.1 ml inoculum, following 1:10 dilution step.

EZ-CFU™ One Step
Available in kits containing: 20 lyophilized pellets of a single quantitative QC microorganism, 10 vials of hydrating fluid (2 ml in each vial), Designed to deliver 10-100 cfu per 0.1 ml inoculum.

EZ-PEC™
Available in kits containing: 20 lyophilized pellets of a single enumerated QC
microorganism, 10 vials of hydrating fluid (2 ml in each vial), instructions for use

EZ-Accu Shot™
Available in kits containing: 5 vials of a single quantitated microorganism
(1 lyophilized pellet per vial); 5 vials of hydrating fluid (1.2 mL in each vial); Illustrated instructions for use; upto 50 tests per kit

EZ-Accu Shot™ Select
Available in kits containing: 6 vial each of 6 different microorganism (1 lyophilized pellet per vial); 6 vials of hydrating fluid (1.2 mL in each vial); Illustrated instructions for use, upto 60 tests per kit

KWIK-STIK™ Plus
Available in canisters of 5 KWIK-STIK units and a Certificate of Analysis.

Lab-Elite™ CRM
Available in kits containing: One self-contained device including a lyophilized microorganism pellet, ampoule of hydrating fluid and inoculating swab (KWIK-STIK™ format.); Certificate of Analysis

Microbiology QC Slides
Available in boxes of 10 slides.

Helix Elite™ molecular standard
Available in kit containing : 1 vial of dried, stabilized RNA or DNA (approximately 100 reactions), 1 vial of molecular standard water for rehydration
Instructions for Use, Certificate of Analysis

E Power™ / E Power™ CRM
Kit contains : Vial of 10 quantitated lyophilized microorganism pellets, Certificate of analysis, Instructions for use

UV-Bio TAG™
Kit contains : UV- Bio TAG Swab :- 6 all-in-one devices including lyophilized microorganism pellet, ampoule of hydration fluid and inoculating swab, UV-Bio TAG Vial :- 6 lyophilized microorganism pellets in glass vials, Instruction for Use

Parasite Suspensions
Kit contains : Vial containing 1ml suspension of parasite species, Certificate of performance

Microbiology QC Sets and Panels
Kit contains : KWIK-STIK™ 2 Pack (2 STIKs of each microorganism), Synthetic DNA/RNA QC Sets and Panels, Inactivated Microorganism QC Sets and Panels

EZ SPORE™
Kit contains : Vial of 10 lyophilized pellets, Illustrated Instructions for use

Cultures are available to actual users only.
Products included in this section are free from Excise duty.

Lab-Elite™

Lab-Elite™ CRM
CERTIFIED REFERENCE MATERIAL

Kit Includes:

- One self-contained device including a lyophilized microorganism pellet, ampoule of hydrating fluid and inoculating swab (KWIK-STIK™ format.)
- Certificate of Analysis

Lab-Elite™ Applications:

- For use in ISO 17025 accredited labs
- Qualitative QC microorganism one passage from the reference strains for ultimate authenticity
- For validation verification of processes and instruments

Following microorganism preparation is *First passage* from the reference culture

KWIK-STIK™ Plus

KWIK-STIK™ Plus - (6 Pack)

KWIK-STIK™ Plus
Limited Passage Microorganisms
KWIK-STIK™ Plus microorganisms are designed to meet the needs of laboratories requiring QC microorganisms that are fewer passages from the reference culture. Each KWIK-STIK™ Plus QC microorganism preparation is just two passages from the reference culture, allowing for more subcultures. Conveniently packaged in a KWIK-STIK™ device featuring a lyophilized QC microorganism pellet, inoculating swab and ampoule of hydrating fluid, KWIK-STIK™ Plus is ready to use and affordable. For added convenience, a peel-off identification label on each stick is included for quality control documentation. KWIK-STIK™ Plus includes five STIKS of a single strain.

Microbiology QC Sets and Panels

QC sets and panels offer a wide range of bundled QC sets and Panels for the most commonly used technologies and standards. Each set or Panel contains the manufacturer recommended quality control strains for a particular instrument or test method in a simple, ready to use format. Each set or Panel also contains the regulation specific (eg. CLSI or EUCAST) recommended quality control strains.

Kit contains :

Live Culture QC Sets and Panels

- KWIK-STIK™ 2 Pack (2 STIKs of each microorganism)

Helix Elite Molecular Standards QC Sets and Panels

- Synthetic DNA/RNA QC Sets and Panels
- Inactivated Microorganism QC Sets and Panels

Carbapenem - resistant Enterobacteriaceae (CRE) Control Panel (Inactivated Swab)	8187	2 sticks	On Request
Charles River Axcess Filamentous Fungi Qualification Panel	5259P	2 sticks	On Request
Enteric Pathogens Control Panel (Inactivated Pellet)	8184	2 sticks	On Request

Each lyophilized microorganism preparation is two passages from the reference culture.

Individual Lyophilized Microorganisms

Individual Lyophilized Microorganisms
LYFO DISK® and KWIK-STIK™

Authentic and Traceable Reference Stock Cultures

Each lyophilized microorganism preparation is not more than Three passages from the reference culture, *requires no pre-incubation, and comes with a shelf-life of 6-24 months in refrigerated storage.*

LYFO DISK®: A vial containing 6 qualitative lyophilized pellets of an individual microorganism strain. This is the most economical reference stock culture option.

KWIK-STIK™: Self-contained units, each includes a lyophilized microorganisms pellet, reservoir of hydrating fluid, and inoculating swab. This is the most convenient and easy-to-use option. Available in a DuoPak of 2 units or 6

Following microorganism preparation is not more than *Three passages* from the reference culture

EZ-CFU™ One Step

EZ-CFU™ One Step
QC Microorganisms For Growth Promotion Tesing

The Growth Promotion Test (GPT) is an important function in the United States (USP), European (Ph. Eur.) and Japanese (JP) Pharmacopoeias. EZ-CFU™ One Step quantitative QC microorganism preparations are used to perform Growth Promotion Tests of culture media with ease. No dilutions are required. EZ-CFU™ One Step is designed to deliver 10-100 CFU with each 0.1 ml inoculum. Each 2 ml vial of hydrated suspension offers 19 inocula. EZ-CFU™ One Step can be used for up to eight hours after hydration if the suspension is refrigerated between uses. Online Certificate of Analysis provides detailed strain information.

EZ-CFU™ One Step kits include:
- *20 quantitative lyophilized microorganism pellet*
- *10 vials of hydrating fluid (2 ml in each vial)*
- *Illustrated instruction for use*

Following microorganism preparation is not more than *Three passages* from the reference culture

EZ-Accu Shot™

For Growth Promotion Testing

EZ-Accu Shot™ is a quantitative microorganism preparation designed for performing Growth Promotion Tests of culture media with ease. Each EZ-Accu Shot™ lyophilized microorganism preparation is designed to deliver 10-100 CFU per 0.1mL of hydrated suspension as recommended by the USP/JP/Ph. Eur. With little to no preparation time required and up to eight hours of stability, Each 1.2 mL vial of hydrated suspension offers 10 inocula. Applicable in methods requiring low cfu concentrations. EZ-Accu Shot™ adds efficiency and flexibility to QC laboratories' busy schedules.

EZ-Accu Shot™ kits include:

- 5 vials of a single quantitated microorganism (1 lyophilized pellet per vial)
- 5 vials of hydrating fluid (1.2 mL in each vial)
- Upto 50 tests per kit
- Illustrated instructions

Following microorganism preparation is of *three passages* or *less* from the reference culture

EZ-Accu Shot™ Select

For Growth Promotion Testing

EZ-Accu Shot™ Select boasts all the same features and benefits as the original EZ-Accu Shot™, but includes 6 compendial microorganism strains for Growth Promotion Testing in one convenient package. EZ-Accu Shot™ Select lyophilized microorganism preparations are designed to deliver 10 - 100 CFU per 0.1mL of hydrated suspension as recommended by the USP/JP/Ph. Eur. With little to no preparation time required and up to eight hours of stability after rehydration, EZ-Accu Shot™ Select adds efficiency and flexibility to QC laboratories' busy schedules. Each 1.2 mL vial of hydrated suspension offers 10 inocula. For added convenience, individual peel-off informational labels are included for each strain.

EZ-Accu Shot™ Select kit includes:

- 6 vials of 6 quantitated microorganisms strain (1 lyophilized pellet per vial)
- 6 vials of hydrating fluid (1.2 mL in each vial)
- Illustrated instruction for use

EZ-PEC™

QC Microorganisms For Antimicrobial Effectiveness and Preservative Efficacy Testing

Ready-to-use EZ-PEC™ quantitative QC microorganism preparations are designed to provide the required microorganism challenge concentrations for Antimicrobial Effectiveness Tests and Preservative Efficacy Tests. When processed as directed, EZ-PEC™ delivers a final concentration of $1.0x10^5$ to $1.0x10^6$ CFU per ml of the product being tested. Strains are less than or equal to 3 passages from reference cultures.

EZ-PEC™ kits include:

- 20 lyophilized pellets of a single enumerated QC microorganism
- 10 vials of hydrating fluid (2 ml in each vial)

UV-BioTAG™

UV- Bio TAG, line of reference strains containing green fluorescent Protein (GFP) markers, make it easy to distinguish standard microorganism strain from laboratory control strains. Optimized for highly visible fluorescence, UV- Bio TAG strains provide better stability because the GFP marker is integrated into the chromosome rather than plasmid.

Benefits :

- Fluoresces under UV light to distinguish QC strains from other possible contaminants
- Instant dissolve pellet reduces preparation time
- Ready-to-use format saves time and money
- Refrigerated storage is easy and economical

Kit contains :

- UV- Bio TAG Swab :- 6 all-in-one devices including lyophilized microorganism pellet, ampoule of hydration fluid and inoculating swab
- UV-Bio TAG Vial :- 6 lyophilized microorganism pellets in glass vials

Helix Elite™ Molecular Standards

Helix Elite™ Molecular Standards are used as controls for developing, validating, and monitoring molecular instruments and assays. It comes in 3 distinct formats: Inactivated, Synthetic Nucleic acids and Genomic Extracts. Each format has been designed for efficiency and usability.

Benefits of Helix Elite™ products provide:

- Non-hazardous materials for safe handling
- Ideal for pathogens which are difficult to grow
- Optimized for time and labor savings
- Independent external controls provide accurate, reliable results
- Convenient room temperature storage

Synthetic Helix Elite™ Molecular standard kit contains :
1 vial of dried, stabilized RNA or DNA (approximately 100 reactions)
1 vial of molecular standard water for rehydration

Parasite Suspensions

Parasite Suspensions is versatile to help labs QC their parasitology diagnostic kits and methods, microscopic examinations, staining procedures, and proficiency programs. Designed to mimic a patient sample for simple control processing, these economical and easy-to-use Parasite Suspensions outperform similar products on the market. They are packaged in a vial containing a 1 ml suspension of a specific parasitic population with known characteristics, formalin and fecal matter. Parasite Suspensions are CE Marked as an In-Vitro Diagnostic (IVD) Medical Device and include a Certificate of Performance which provides detailed information about the parasite.

Benefits :

- Convenient test ready format saves you time and money
- Designed to mimic a patient sample for simple control processing (For QC of diagnostic test kits and methods, Microscopic examinations, Proficiency tests, Educational purposes)
- Includes a Certificate of Performance that provides a detailed description of the specimen
- CE Marked as an In-Vitro Diagnostic (IVD) Medical Device
- 2 year shelf life
- Room temperature storage

EZ-Rapid Shot Kit

EZ-Rapid Shot - Simplify your Growth Promotion Testing

- Easy to disperse lyophilized culture makes preparation faster.
- Isotonic rehydration fluid maintains the viability of organisms.
- Avoid cumbersome serial dilution and extensive culture maintenance activities.
- Both cultures & rehydration fluid are supplied together in a kit format and can be stored at 2-8°C.

For Growth Promotion Testing

EZ-Rapid Shot is a quantitative microorganism preparation designed for performing Growth Promotion Tests of culture media and delivers 10-100 CFU per 0.1mL of hydrated suspension as recommended by the USP/JP/Ph. Eur.

With little to no preparation time required and up to eight hours of stability, Each 1.2 mL vial of hydrated suspension offers 10 inocula.

EZ-Rapid Shot kit include below mentioned based on the pack size :

- 10 or 20 vials of a single quantitated microorganism (1 lyophilized pellet per vial)
- 10 or 20 vials of hydrating fluid (1.2 mL in each vial)

ENDOTOXIN ASSAY KITS (BET)

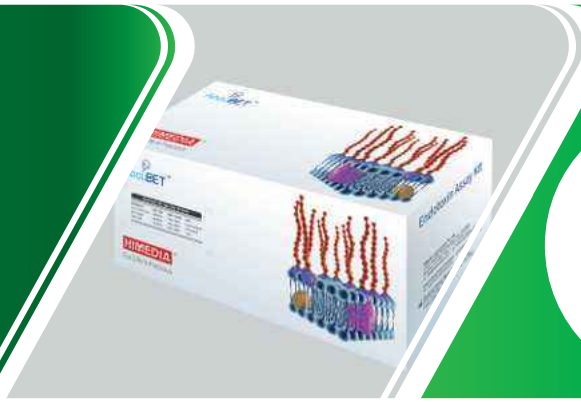
Your perfect choice of premium quality, cost-effective reagents for Bacterial Endotoxin Assay



AccuBET™

ADVANTAGES

- Single-test ampoule format, popular across 15 countries, available for all lysate sensitivities
- High-stability Control Standard Endotoxin (CSE) provided with the kit
- Cost effective premium quality reagents
- Ampoule packing eliminates the need for reconstitution of the lysate thereby saving endotoxin free water
- Ampoule packing also reduces need for pyrogen free tubes.
- Simplified protocol - add sample/ CSE dilution, mix and incubate!

INTENDED USE

- Qualitative and semi quantitative detection of endotoxin in pharmaceuticals, biological products, radioactive medicine and medical devices, hemodialysis solution, dialysis water and ACD solution
- Pyrogen control or endotoxin detection during production processes of above products as well as of associated raw materials

POTENTIAL USER SEGMENTS

- Bio-pharmaceuticals
- Hospitals & Diagnostic labs
- Pharmaceuticals
- Medical device manufacturers

Gel-Clot Endotoxin Limit Method for Qualitative and Semi Quantitative Detection of Bacterial endotoxin

The Gel-clot range of bacterial endotoxin testing products comes equipped with assorted kits, reagents and accessories to help you perform the qualitative gel-clot bacterial endotoxin assay with ease. **Our assorted kits provide you with all the reagents required for the assay namely the Tachypleus Horseshoe Crab Amoebocyte Lysate (TAL), Control Standard Endotoxin (CSE) and Bacterial Endotoxin Testing (BET) Water.** The reagents are separately available for refilling as per your requirement thus imparting great flexibility to your assay performance. You can choose the Ampoule format thereby ensuring maximal utilization and minimal wastage of the assay reagents.

Gel-Clot Endotoxin Assay Principle

- Presence of the endotoxin activates factor C in the horseshoe crab amoebocyte lysate
- Activated factor C further activates factor B
- Pre-clotting enzyme (inactive) is cleaved by activated factor B into clotting enzyme (active)
- Active enzyme reduces Coagulogen into Coagulin thereby leading to clot formation

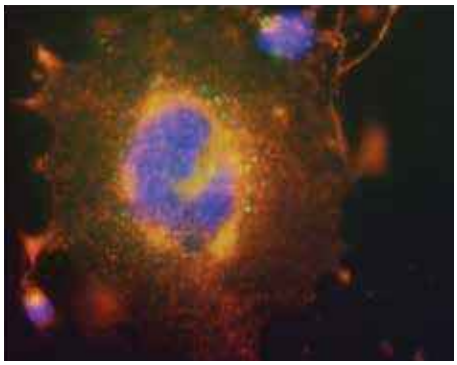
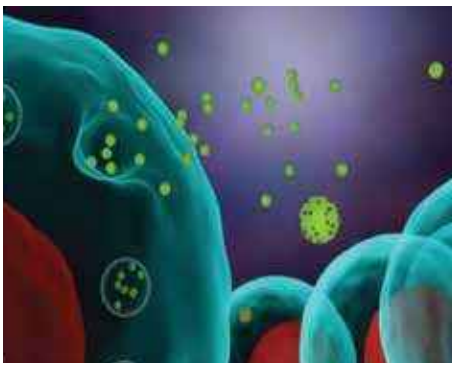
HUMAN CELLS

HepatoXcell™ Primary Human Hepatocytes
Discover how HepatoXcell™ provides a solution for your predictive drug development and toxicity testing.

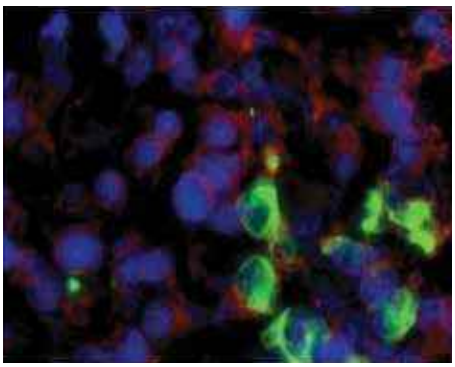


Cancer Panels
ATCC cancer panels consist of tumor cell lines from tissue of tumor origin and are annotated to become powerful cancer tool.

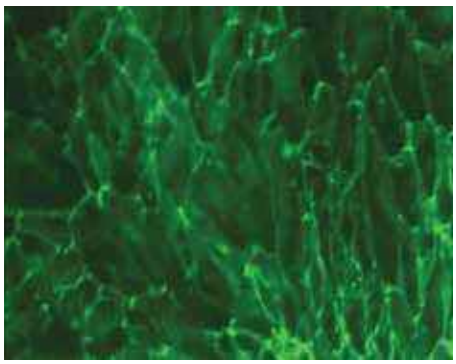
Certified Reference Materials
ATCC Certified Reference Material (CRM) helps you establish sensitivity, linearity, and specificity during assay validation.



Exosomes
Exosomes are extracellular vesicles that are released from cells. Exosomes are important in cell-to-cell communication.

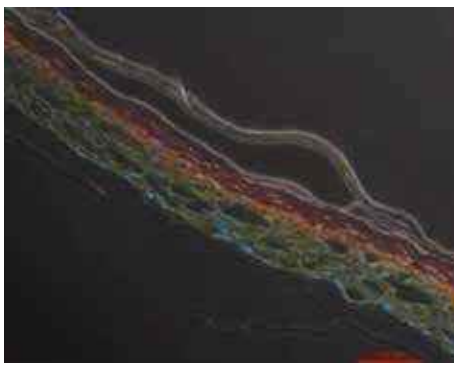


Genetic Mutants
Tumor cell lines become powerful research models and drug discovery tools when the genetic mutant or abnormalities that drive their phenotype are known.

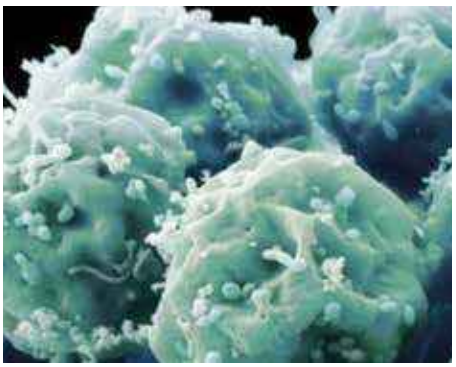


hTERT-immortalized Cells
Human telomerase reverse transcriptase (hTERT) immortalized primary cells represent a breakthrough in cell biology research that combines the in vivo nature of primary cells with the traditional cell line's ability to survive continuously in vitro.

Nucleic Acids
We provide ready-to-use nucleic acids from clinically relevant cell lines, allowing you to focus on your research.

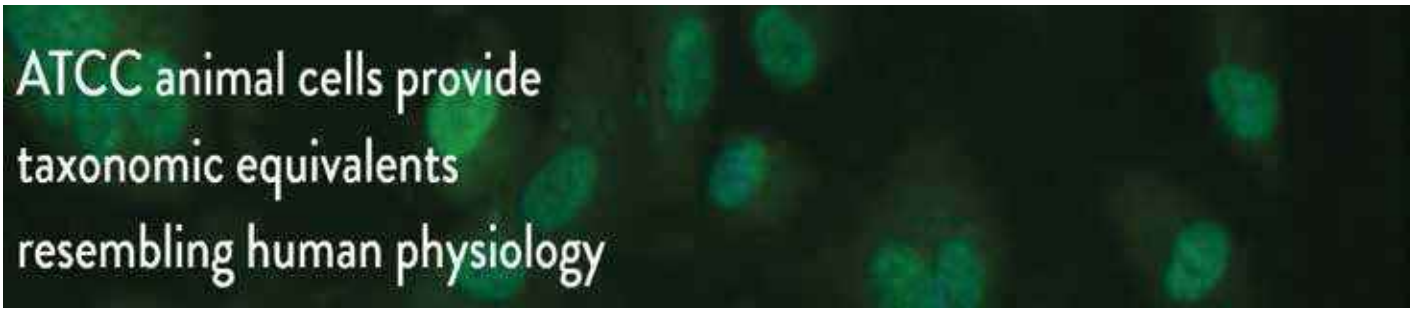


Primary Cells
Traditional attention to quality, research, and science makes ATCC your most reliable source for primary cells.



Stem Cells
ATCC has a vast portfolio of cultures to choose from, including mouse embryonic stem cells, human mesenchymal stem cells.

ANIMAL CELLS



ATCC offers comprehensive list of animal cell lines from a range of animals, including:

- Bovine from a variety of tissue types such as endometrium and cornea
- Canine from range of diseases including osteosarcoma and histiocytosis
- Fish from a variety of tissue sources such as trunk, gill, fin, and ovary
- Hamster cell lines from a wide selection of tissues such as lung, ovary, and kidney
- Monkey cell lines from several species and an assortment of tissue types such as lung and kidney
- Murine cell lines from a wide range of normal and disease states
- Rabbit cell lines representing an array of tissue types including epidermis and kidney
- Rat cell lines from a range of disease states including hepatoma and glioma
- Cell lines from an assortment of other species, including insects such as Drosophila melanogaster and Spodoptera frugiperda, frog species such as Xenopus laevis, and bird species such as Gallus gallus

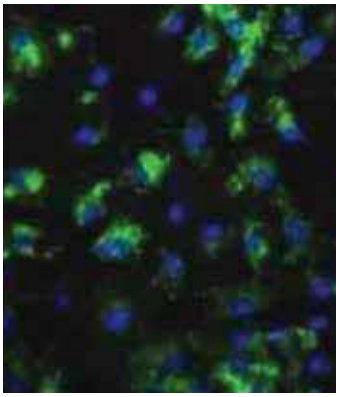
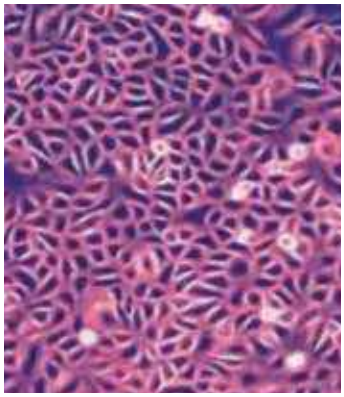
PRIMARY CELLS

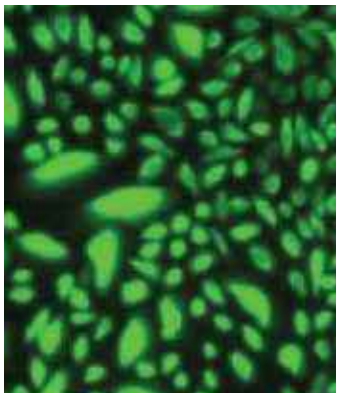


Endothelial cells
Primary endothelial cells are useful tools in studying cancer therapy, wound healing, high-throughput and high-content screening projects, cell signaling studies, and toxicology screening.

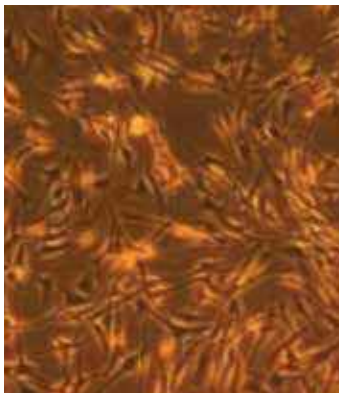


Keratinocytes
From the epidermis of human adult skin or human neonatal foreskin, keratinocytes are significant in the study of diseases such as skin cancer and psoriasis.

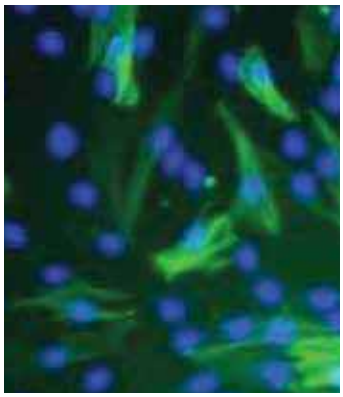
Epithelial cells
Primary epithelial cells are valuable tools for modeling the barriers between the inside and outside of the body and used in a variety of applications from cancer research to toxicology.



Melanocytes
Specialized skin cells that produce the pigment melanin, melanocytes are useful as models for wound healing, toxicity, melanoma, dermal response to ultraviolet (UV) radiation, skin diseases, and cosmetic research.

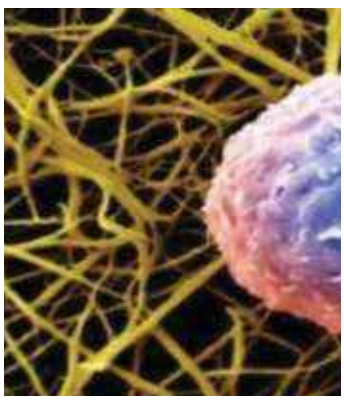


Fibroblasts
Primary fibroblasts are used in studies related to wound healing, tissue engineering and regeneration applications, and inducing pluripotent stem (iPS) cells.

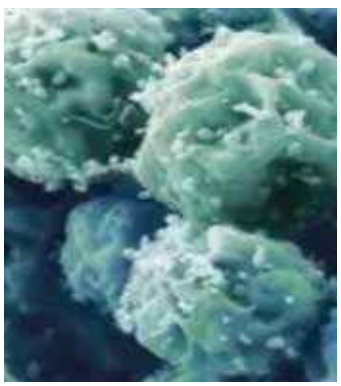


Smooth muscle cells
Primary smooth muscle cells (SMCs) line the insides of hollow organs and mediate their contractility. SMCs can be used to model hypertension fibrosis as well as cancer and other diseases.

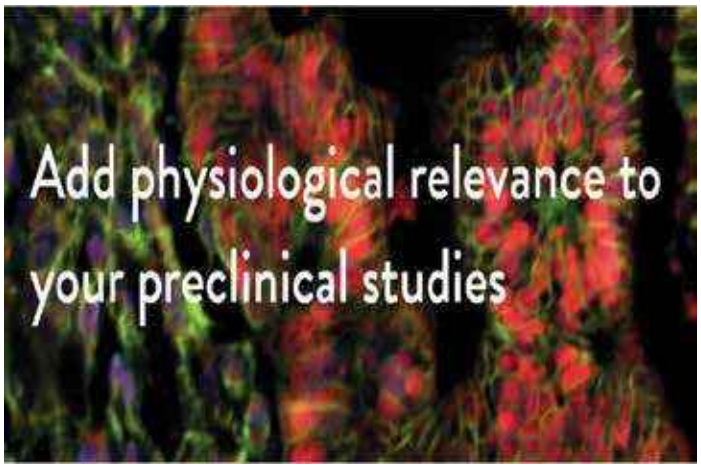
Immune cells
Primary immune cells, including peripheral blood mononuclear cells (PBMCs), are valuable tools for designing and testing cell-based assays and treatments.



Stem cells
Stem cells develop into many different cell types in the body. Because of their differentiative capacity, they offer new potentials for modeling disease states.



Organoids



3-D models with biological relevance

Organoids are invaluable preclinical models for studying cancer and offer many advantages over existing human or non-human animal cancer models. These complex, self-organizing microtissues are grown embedded within 3-D extracellular matrix, enabling the formation of complex structures that closely resemble the architecture and physiological functions of organs or tissues. Because they simulate the interactions seen between cells and their surrounding matrix, organoids serve as relevant models for cancer research and drug discovery.

Patient-derived organoids from ATCC

In collaboration with the Human Cancer Models Initiative (HCMI), ATCC offers scientists a wide variety of next-generation 3-D patient-derived organoids. Our portfolio comprises authenticated, fully characterized organoids derived from healthy and cancerous tissues representing a variety of physiological systems. To help you get the most from these models, we also provide organoid growth kits and comprehensive protocols and tutorials to facilitate organoid growth and maintenance.

HepatoXcell™ Primary Human Hepatocytes

The Solution for Your Predictive Drug Development and Toxicity Testing

Primary human hepatocytes are considered the gold standard for in vitro liver models due to their high predictive value in drug metabolism and toxicity studies. They can provide early insights into how a drug will behave in the human body, potentially reducing the risk of adverse effects in clinical trials. ATCC hepatocytes are meticulously isolated and characterized to ensure the highest quality and performance for your drug development needs.

High viability and functionality: Our hepatocytes exhibit excellent viability and retain key liver functions, making them ideal for drug metabolism, toxicity studies, and liver disease research.

Comprehensive characterization: Each batch undergoes rigorous testing to ensure consistency and reliability, including assessments of enzyme activity, protein expression, and metabolic function.

Genetic diversity: These cells can be sourced from multiple donors, reflecting the genetic variability found in the human population. This diversity allows for more comprehensive studies on how different genetic backgrounds can influence liver function and drug response.

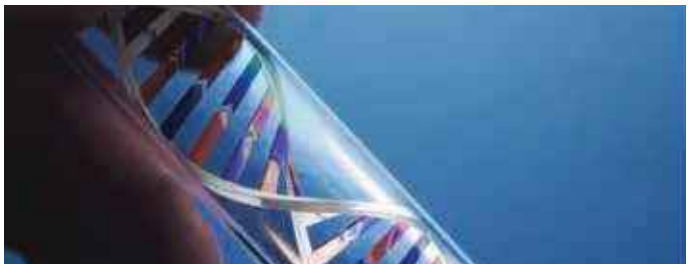
SERVICES



Cell Authentication
Cell authentication is essential. Skipping the authentication step can lead to lost time, money, and publications owing to cross-contamination and misidentification. ATCC can quickly confirm the identity of almost any cell line by using analytical techniques such as sterility testing, CO1, STR profiling for human or mouse cells, and mycoplasma testing so you have confidence in your research materials.

Cell Bank Production
ATCC has been the authority on cell and microbial banking for nearly 100 years. We have the facilities and the expertise to expand cell lines to create master and working cell banks for your assay needs. The cell lines can be supplied by you, or from the ATCC catalog, or from primary cells that are sourced and derived to your specifications. We can support all your Master Cell Bank and Working Cell Bank needs.

Depositing with ATCC
With nearly a century of experience in biomaterials management, we have the expertise needed to authenticate, store, maintain, and globally distribute biological samples. Materials are securely managed through a temperature-controlled supply chain, 24/7 equipment monitoring, and on-call after-hours personnel. Our deposit services include General Collection Deposit, Patent Deposit, Type Strain Deposit, and National Park Service Deposit.

cGMP Services Webinar
For nearly a century, ATCC has been regarded as a pioneer in cell banking and storage, using the most reliable and standardized procedures and equipment to manufacture and preserve your critical biomaterials. In this webinar our scientists discuss ATCC's new cGMP services, highlighting how you can avoid time and labor intensive in-house production and eliminate associated risks and costs.

ATCC

CELLBIO

Primary-like biology. Extended growth. Better consistency.

ATCC® hTERT-immortalized primary cells are designed to combine the physiological relevance of primary cells with the extended proliferative capacity of continuous cell lines. These cells are genetically modified to maintain primary-cell-like characteristics while supporting longer-term in vitro studies.

- Primary Cell like Physiology
- Extended Lifespan
- Improved Reproducibility

Applications

- ✓ Drug discovery and toxicity screening
- ✓ Cancer biology research
- ✓ Gene expression and signaling studies
- ✓ Tissue engineering and regenerative medicine
- ✓ Long-term biochemical studies

Why ATCC?

- Authenticated cell lines
- Extensive quality control testing
- Stable phenotype and lifespan
- Trusted global resource for biological materials

Available Cell Types

- Aortic endothelial cells
- Bronchial epithelial cells
- Mammary epithelial cells
- Skin fibroblasts
- Mesenchymal stem cells
- Renal epithelial cells
- Retinal pigment epithelial cells
- Schwann cells

These cells provide stable growth and reliable performance across passages, making them suitable for prolonged experimental workflows.

Our Biopharma Capabilities,

Services

1. Gene synthesis and cloning.
2. Cell line development for Biosimilar.
3. Single cell cloning

Product:

- SFM for variety of mammalian cell lines.
- Supplements and reagents for cell culture
- Multiwell plates and shake flask

Cell line Development Offering 1

2 Upstream Process Development Scale Up

Services

1. Media customization
2. Media optimization
3. Process scaleup across scales.
4. Non GMP material generation.

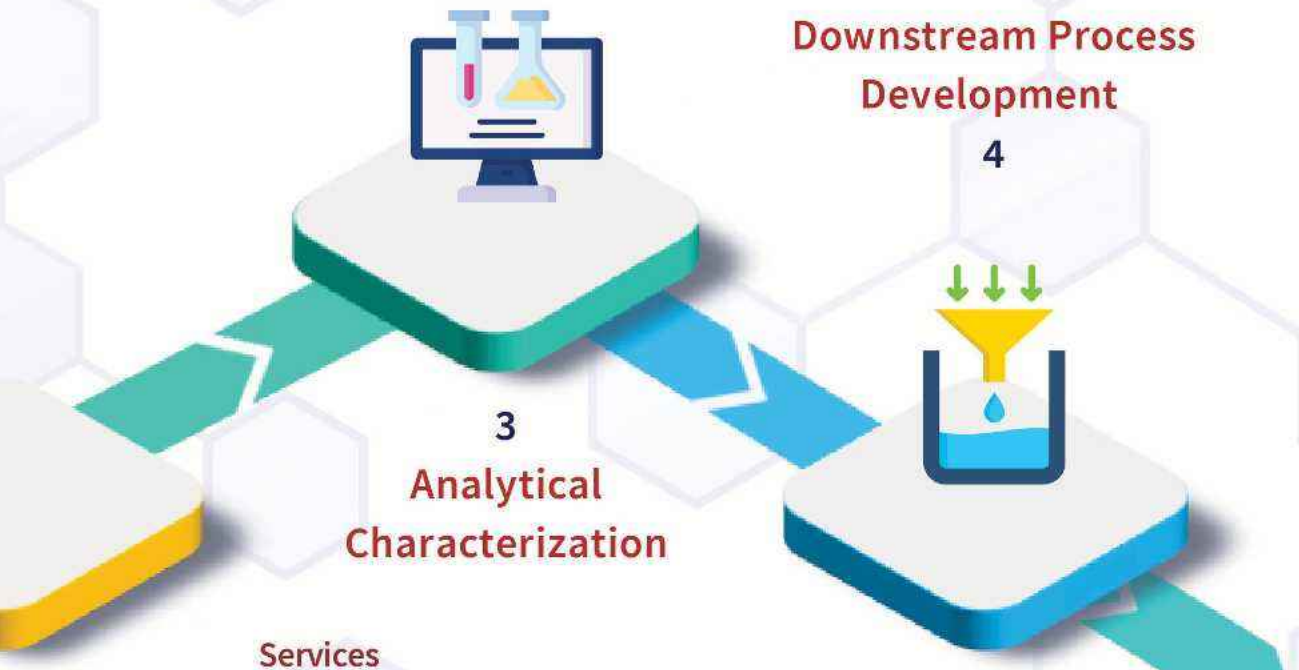
Products and Services

Services

1. Chromatography development and optimization.
2. Reagent grade protein purification (eg. Enzymes)
3. Non GMP material generation.
4. Support scaleup and tech transfer.

Product:

- Filtration solution & Assembly
- Vacuum-driven filters
- Media Filtration
- Vacuum Pump
- Syringe driven Filters
- Filter Membrane



Services

1. Biopharmaceutical characterization services.
2. Method development validation and sample analysis.
3. Product linked impurity and modification analysis.

Product:

- Buffers and reagents

Bio Process Platform (Services & Products)

Developing biosimilars is crucial for making life-saving biologic therapies more affordable and accessible to millions. With a growing burden of chronic diseases like cancer, diabetes, and autoimmune disorders, biosimilars offer a cost-effective alternative to expensive biologics, reducing healthcare costs while ensuring high-quality treatment.

With many blockbuster biologics losing patent protection, biosimilar approvals and market entries are accelerating worldwide, creating significant opportunities for biopharma companies.

Successful biosimilar development requires optimized cell culture media, high-purity chemicals, and robust bioprocesses to ensure comparability with reference biologics. Our comprehensive contract End-to-end R&D services—including custom media development, cell line development, upstream process downstream process development, and analytical characterization empower companies to achieve higher yields, enhanced quality, and regulatory compliance. By leveraging our deep expertise, biopharma companies can accelerate biosimilar development, streamline pipeline priorities, and bring cost-effective therapies to market faster.

Biopharma Services

HiMedia Labs is your end-to-to-development partner for biologics development

Transforming Science into Biopharma Success

HiMedia Labs provides integrated development services for your biologic molecule from cell line development, upstream process development, downstream purification with analytical testing & characterization services at every stage. We will manage your project with flexibility and agility to lead you toward your goals.

Cell Line Development

HiMedia's cell line development protocols leverage more than four decades of experience of its expert team involved in developing recombinant clones for regulated markets.

Cell line development workflow is designed to reduce the time to obtain clones with established monoclonality and thus speed up the time to reach process development and subsequent process scale up. All the steps in the cell line development workflow are well documented and meets the stringent regulatory expectations at the time of BLA filing.

Services within cell line development

- Gene synthesis and vector construction
- Transfection grade DNA preparation
- Transient expression for developability assessment
- Recombinant biologic product cell lines supplied with regulatory compliance report, assured monoclonality, established genetic stability
- Single cell cloning with regulatory compliance report

Upstream Process Development

HiMedia has the expertise to develop robust, reproducible, and seamlessly scalable processes that can allow the customers to reach process scale-up for clinical development quickly. There is a combined experience of more than three decades of process development at HiMedia.

Upstream process development would involve use of chemically defined media and feeds with no animal origin products to provide highly consistent results and complete regulatory compliance.

Development of upstream cell culture process would be aimed at improving the productivity of the clones as well as assessing product quality eg. glycosylation and charge variants. Typical upstream process development can be carried out at different scales – 1 L, 5 L, 10 L and 50 L to demonstrate robustness as well as cater to customer needs.

Services within upstream process development

- Non-gmp material production
- Media customization around customer cell line using high-throughput methods
- Media optimization in bioreactor tubes and shake-flasks
- Process scale-up across different scales with analytical testing
- Process optimization with analytical testing and characterization
- Perform process validation

Downstream Process Development

HiMedia possesses the expertise to develop robust, reproducible, and scalable downstream processes that enable customers to rapidly transition to clinical-scale manufacturing. With a combined experience of over three decades in process development, HiMedia offers comprehensive solutions for purifying biopharmaceuticals.

Downstream process development focuses on efficient isolation and purification of the target protein from the cell culture supernatant. This involves a multi-step approach, including Clarification, Capture, Intermediate, Polishing Chromatography and Formulation. We utilize a flexible approach to optimize critical process parameters for maximum yield and purity.

The downstream process development would be aimed at achieving the quality specifications in terms of Purity, Safety and Efficacy. We can cater to purification up to the scale of 5L. The processes are designed to be scaled to manufacturing scales.

Services within downstream process development

- Non-GMP material generation for Tox and Animal studies
- Chromatography development and optimization
- Formulation: Filtration (TFF) development and sizing
- Scale-Up & Tech Transfer: Support seamless scale-up processes from lab to pilot and manufacturing scales

Reagent grade protein purifications like enzymes from natural and recombinant sources

Analytical Method Development

HiMedia Laboratories offers a comprehensive range of biopharmaceutical characterization services, specifically designed to support the development of novel biologics and biosimilars at all stages of development. Our mission is to assist biopharmaceutical developers in meeting regulatory compliance through an extensive and thorough comparability analysis. We provide a data-driven approach, ensuring that the totality of analytical evidence supports a seamless regulatory submission process. Our services are designed to meet the high standards required in the biopharmaceutical industry, ensuring that our clients can confidently advance their biologics programs.

Biopharmaceutical Characterization Services

HiMedia provides detailed structural insights into proteins using the following techniques:

- Intact Mass Analysis
- Peptide Mapping Analysis
- Amino Acid Composition Analysis
- N- and C-Terminal Sequencing
- Disulfide Bridge Analysis
- Protein titer Estimation

Method Development, Validation & Sample Analysis

HiMedia collaborates closely with clients to define and agree upon a plan for method qualification/validation and sample analysis. The analysis is performed based on the developed and validated method. The final deliverables include:

- Method Development, Qualification/Validation Report
- Test Results with Basic Interpretation

Product-Linked Impurity and Modifications Analysis

To ensure the quality and stability of biologics and biosimilars, we offer specialized impurity and modification analysis services, including:

- Free Thiol Content Analysis
- Glycosylation Analysis
- Aggregation Analysis
- Charge Variant Analysis
- Oxidation Analysis
- Deamidation Analysis
- Host Cell Protein (HCP) Analysis

Custom Media Development

Media Development is our core expertise, and we combine this with our depth in analytical characterization, we can deliver custom media to drive optimal results.

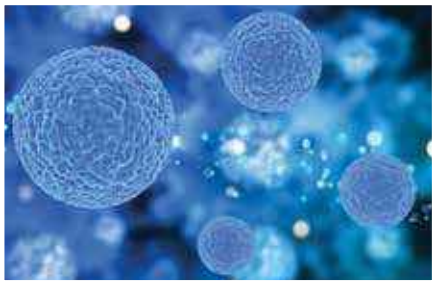
Nutrient consumption pattern over time provides critical understanding of what the cells are using and what do they require throughout culture period. This supports rational fine-tuning of specific nutrient requirements to improve cell viability, peak culture density and longevity, finally resulting in highest productivity and quality of output.

Spent medium analysis is therefore a major tool to analyse CMAs, CPPs and CQAs in critical processes such as

- Media screening and development
- Clone screening and selection
- Process development
- Optimization of feeding strategy

Spent Media Analytical Service offers you a complete set of tests required to analyse nutrient profile of your spent media. Using a complete regime of advanced analytical instruments, our team of experience scientists has optimized and validated methods for analysis of cell culture supernatants.

Our years of experience in **Media Development** with state-of-the-art infrastructure for media screening from microliter volume to bioreactors



We have built **Cell Culture R & D** for handling variety of mammalian cell lines like biopharma and cultivated meat as an example

Introducing Advanced Analytical Lab of Cell Biology at HiMedia offers services to Pharma, Biopharma, and Bioscience Companies with our high technological analytical instruments.

Venture into the world of accuracy and creativity with HiMedia's CellBio. We are excited to present our Advanced Analytical Services, which will use modern technology to strengthen your efforts in biotechnology, biopharmaceutical, pharmaceutical, and scientific fields. Our offerings have been carefully developed to assist your business conducting scientific research by providing unparalleled insights through powerful data analytics. We offer complete support with a persistent commitment to excel for your requirements in quality assurance and research & development. Discover the limitless possibilities that our modern analytical services allow to enhance productivity, stimulate innovation, and guarantee success in the constantly evolving fields of pharma, biopharma, bioscience, and biotechnology.

FEATURES

- **Advanced Instrumentation:**
  - Utilize advanced analytical instruments for precise and sensitive measurements.
- **Thorough Biomolecule Analysis:**
  - Analyze a wide range of biomolecules, including proteins, nucleic acids, lipids, and metabolites.
- **High-throughput Screening:**
  - Accelerate research with efficient high-throughput screening for large sample sets.
- **Customized Assay Development:**
  - Custom assays to specific project needs, ensuring relevance and accuracy.
- **Sensitive Detection Methods:**
  - Employ advanced detection methods for trace-level analysis and increased sensitivity.
- **Quantitative Analysis:**
  - Provide accurate and reliable quantitative measurements for precise data interpretation.
- **Proteomics and Metabolomics Solutions:**
  - Offer services for in-depth proteomics and metabolomics profiling.
- **Regulatory Compliance:**
  - Ensure adherence to regulatory standards, providing reliable data for submissions.
- **Data Interpretation and Reporting:**
  - Deliver comprehensive data interpretation and detailed reports for informed decision-making

HRMS Analytical Services

Biopharmaceutical Characterization Services by HiMedia Laboratories

HiMedia Laboratories offers a comprehensive range of biopharmaceutical characterization services, specifically designed to support the development of novel biologics and biosimilars at all stages of development. Our mission is to assist biopharmaceutical developers in meeting regulatory compliance through an extensive and thorough comparability analysis. We provide a data-driven approach, ensuring that the totality of analytical evidence supports a seamless regulatory submission process.

Biosimilarity Assessment Characterization

HiMedia Laboratories is entrusted with delivering a complete data package for assessing Biosimilarity between test and reference products. Each test result is meticulously examined, and any deviations are carefully analyzed to ensure accuracy and reliability. The final deliverable includes a detailed Technical Report that evaluates Biosimilarity, leveraging comprehensive analytical evidence to ensure regulatory standards are met.

Comparative Assessment for Biosimilars and Abbreviated New Drug Applications (ANDA)

During the manufacturing of biosimilars and products under Abbreviated New Drug Applications (ANDA), comparative assessment studies are crucial to ensure that any changes in the manufacturing process do not adversely affect the quality, safety, or efficacy of the biologic product. These studies are also essential for providing analytical confirmation that the drug product or substance maintains similar quality attributes before and after any changes in the manufacturing process.

Post-Translational Modifications (PTMs)

For biologic drug substances produced through bioprocessing, post-translational modifications (PTMs) and variants are common occurrences. PTMs can introduce structural heterogeneity, which can influence the structure, stability, and interactions of proteins. Determining PTMs is essential but can be challenging due to the need for a complex array of detailed analytics to confirm the identity of the protein and ensure a consistent manufacturing process. Incorrect modifications can lead to potentially harmful immune responses, making precise and thorough analysis critical.

Proteomics and Protein Analysis Services

As a trusted expert in protein analysis, HiMedia utilizes state-of-the-art Mass Spectrometry and Spectroscopy techniques to deliver cutting-edge solutions for life sciences researchers worldwide. We engage in close collaboration with our clients, assisting them at every step right from understanding their challenges to designing experiments and executing them within a mutually agreed-upon technical scope.

High Resolution Mass Spectrometry Analysis of Peptides and Proteins

The analysis of proteins is central to drug development, particularly in the realm of biopharmaceuticals. Proteins play a crucial role in all biomedical systems, making their accurate identification, quantification, and quality assessment essential. This requires instruments that are highly sensitive, accurate, and capable of offering a broad dynamic range. Mass spectrometry (MS) is a powerful technique that provides highly accurate information on the molecular weight of intact molecules, making it invaluable for protein identification, characterization, and quantification. The speed, sensitivity, and versatility of MS make it an indispensable tool in the analysis of proteins and peptides.

Key Features of High Resolution Mass Spectrometry for Protein Analysis

1. High Accuracy and Sensitivity:
   - Our HRMS offers high sensitivity, allowing for the detection of proteins and peptides at very low concentrations.
   - The high accuracy of MS ensures precise molecular weight measurements, which are crucial for identifying and characterizing proteins.
2. Broad Dynamic Range:
   - HRMS can analyze a wide range of protein concentrations, from picomolar to micromolar levels, making it suitable for both high-abundance and low-abundance proteins.
3. Versatility:
   - HRMS can be used for various applications, including protein identification, quantification, post-translational modification (PTM) analysis, and structural characterization.
4. Structural Characterization:
   - High Resolution Mass Spectrometry (HRMS) is particularly useful for detailed structural analysis of protein therapeutics, including synthetic and recombinant peptides. HRMS provides highly accurate data on the molecular structure, which is essential for assessing the quality attributes of protein therapeutics.

Applications at Himedia

At Himedia, we offer High Resolution Mass Spectrometry (HRMS) services for the structural characterization of protein therapeutics. Our HRMS capabilities include:

1. Protein Identification:
   - Accurate identification of proteins and peptides, ensuring that the correct molecules are being analyzed.
2. Characterization:
   - Detailed analysis of protein structure, including the identification of post-translational modifications (PTMs) such as glycosylation, phosphorylation, and oxidation.
3. Quantification:
   - Precise quantification of protein and peptide concentrations, which is essential for ensuring consistent quality in biopharmaceutical production.
4. Quality Assessment:
   - Comprehensive assessment of quality attributes, including purity, stability, and structural integrity, to ensure that protein therapeutics meet regulatory standards.

By leveraging the advanced capabilities of HRMS, Himedia provides highly accurate and reliable analysis, supporting the development and quality control of protein therapeutics. Our services are designed to meet the high standards required in the biopharmaceutical industry, ensuring that our clients can confidently advance their drug development programs.

HRMS-Based Biopharmaceutical Characterization Services

Structural Characterization Services

HiMedia provides detailed structural insights into proteins using the following techniques:

- Intact Mass Analysis
- Peptide Mapping Analysis
- Amino Acid Composition Analysis
- N- and C-Terminal Sequencing
- Disulfide Bridge Analysis
- Protein titer Analysis

Product-Linked Impurity and Modifications Analysis

To ensure the quality and stability of biologics and biosimilars, we offer specialized impurity and modification analysis services, including:

- Free Thiol Content Analysis
- Glycosylation Analysis
- Aggregation Analysis
- Charge Variant Analysis
- Oxidation Analysis
- Deamidation Analysis
- Host Cell Protein (HCP) Analysis

Method Development, Validation, and Sample Analysis

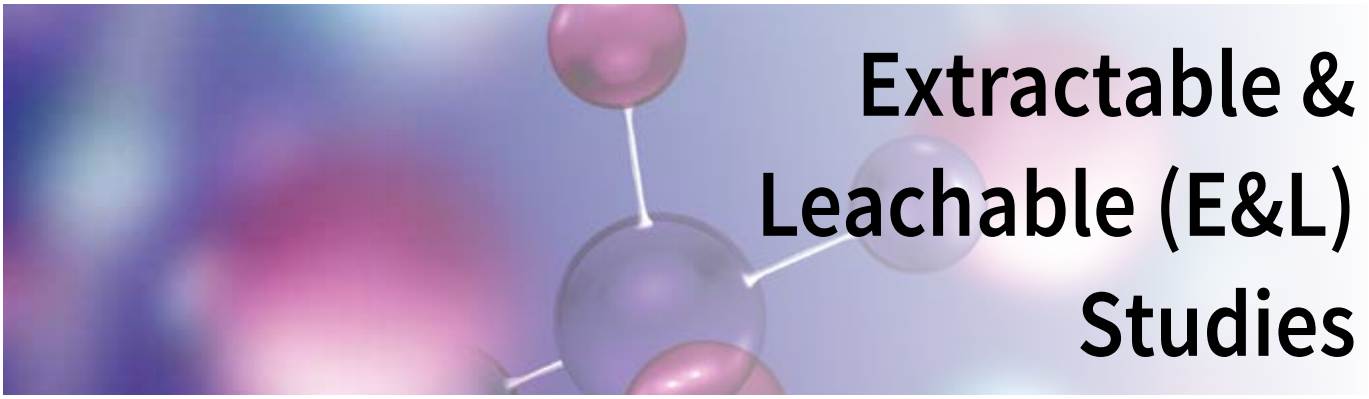
HiMedia collaborates closely with clients to define and agree upon a plan for method qualification/validation and sample analysis. The analysis is performed based on the developed and validated method. The final deliverables include:

- Method Development , Qualification/Validation Report
- Test Results with Basic Interpretation

Test Analysis Analytical Services

HiMedia also offers flexible analytical services, where tests are conducted using pre-developed methods and advanced techniques. The deliverables include the Test Results, while interpretation and Biosimilarity assessment are to be carried out by the client. This approach ensures efficiency for clients who have internal capabilities to analyze the results further.

At HiMedia Laboratories, our biopharmaceutical characterization services are backed by robust scientific expertise and cutting edge technology, ensuring reliable, high-quality solutions to advance biologics and biosimilar development.



Extractable & Leachable (E&L) Studies

Extractable and leachable (E&L) compounds can originate from pharmaceutical container closure systems, process equipment, and medical device packaging, potentially contaminating drug products. Comprehensive E&L studies are critical to ensure product safety, quality, and compliance with regulatory standards.

Key Services Offered:

- **Container Closure System (CCS) Selection:** Tailored for various dosage forms and medical devices.
- **Customized E&L Studies:** Designed and executed per regulatory guidelines such as USFDA (USP <1663> and <1664>), EMA, PQRI, ICH, or specific customer requirements.

Tests Offered:

- Hydrolytic Resistance
- Glass Grains & Surface Glass Tests
- Surface Etching
- Chemical & Physicochemical Tests
- Ink/Gum Migration

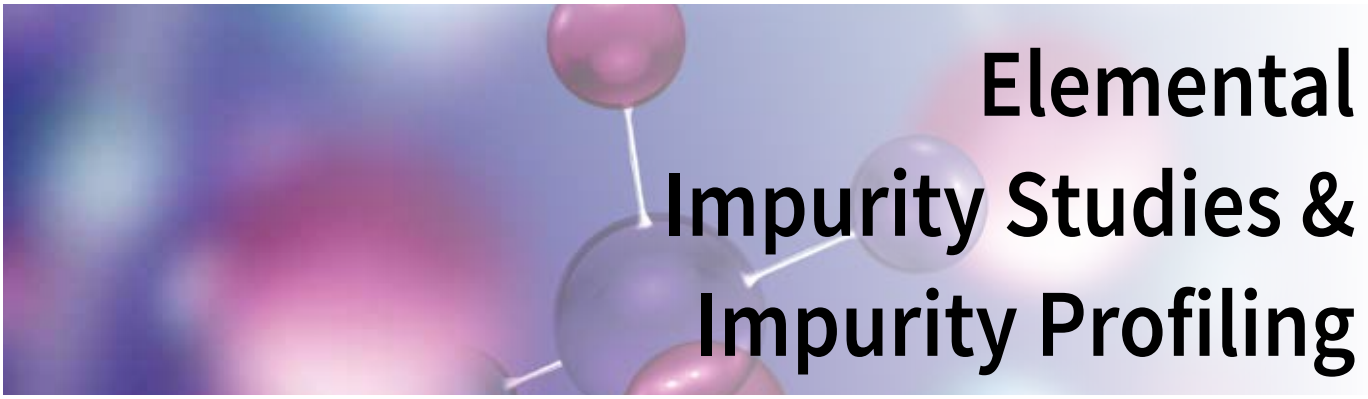
Techniques Utilized:

- Advanced analytical tools and methods, including:
  GC-MS/MS, LC-MS/MS, IC, ICP-MS

We conduct E&L testing on:

- **Containers & Packaging Materials:** HDPE, LDPE, PP containers, rubber stoppers, glass vials, syringes, injectable bags, blister packs, laminated tubes, tubing, and filters.
- **Auxiliary Articles & Manufacturing Aids:** Resins, gaskets, O-rings, implants, films, and more.
- **Drug Product Compatibility:** Testing for solids, parenterals, ointments, syrups, gels, inhalations, creams, emulsions, transdermal patches, and suspensions.

By partnering with us for E&L studies, you ensure regulatory compliance, protect patient safety, and maintain the integrity of your pharmaceutical products.



Elemental Impurity Studies & Impurity Profiling

During the manufacturing process, medications may contain elemental impurities from a variety of sources. These contaminants can be added purposefully, like with catalysts, or accidentally, through the use of drugs, water, excipients, manufacturing equipment, or leaching from container closure mechanisms.

At CellBio HiMedia, we recognize how crucial it is to assess elemental impurities in raw materials, pharmaceutical products, and active pharmaceutical ingredients (APIs). To guarantee the safety and quality of drug ingredients and completed drug products, adherence to industry standards such as the International Council for Harmonization (ICH) and the United States Pharmacopeia (USP) is essential.

Impurity Profiling and Excipient Analysis

Excipients are essential components in the manufacturing of pharmaceutical formulations, including biologics and biosimilars, serving various functions such as solubilization, stabilization, and delivery. It is imperative to assess excipients for biological safety and ensure they meet full monograph specifications. The formulation must also be tested for potentially toxic impurities to enhance safety and rule out any harmful effects. This includes:

1. Impurity Profiling: Identifying and quantifying impurities in the drug substance and product to ensure they are within acceptable limits and do not pose a risk to patient safety.
2. Excipient Analysis: Ensuring that all excipients are of high quality and free from contaminants that could affect the safety or efficacy of the final product.

At CellBio Himedia, our elemental impurity testing and validation services are designed to meet the highest regulatory standards.

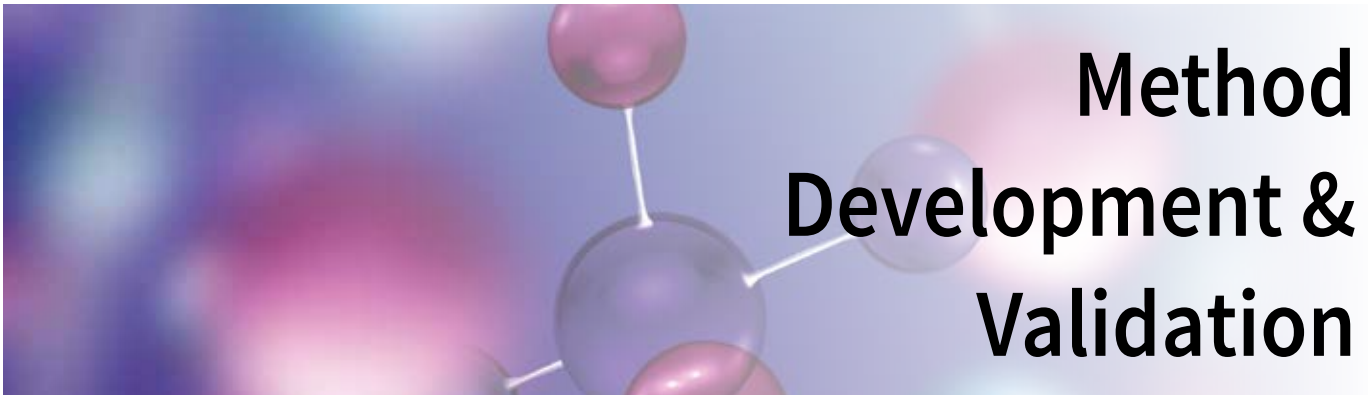
We specialize in:

- Regulatory Compliance Testing: Adhering to USP General Chapters <232> and <233>, ICH Q3D, EMA guidelines, and tailored client-specific requirements.
- Advanced Analytical Techniques: Utilizing ICP-MS with sample preparation carried out through conventional or microwave digestion methods for precision and reliability.

Our comprehensive testing services cover:

- Active Pharmaceutical Ingredients (APIs) / Drug Substances
- Drug Products: Including tablets, capsules, ointments, lotions, syrups, suspensions, gels, inhalations, creams, emulsions, and transdermal patches.
- Raw Materials and Intermediates
- Excipients

Choose CellBio Himedia to ensure your pharmaceutical / bio-pharmaceutical products achieve the highest levels of safety, quality and compliance with global regulatory standards.



Method Development & Validation

Analytical method development and validation are critical components of pharmaceutical development, ensuring precise qualitative and quantitative estimations, establishing product specifications, and determining shelf life.

Validated methods confirm process robustness, ensuring consistent results despite operator or laboratory variations.

Our Services

We adhere to **ICH Q2, USP <1225>**, method verifications under **<1226>**, and/or specific customer requirements.

Analytical Services:

- Identification and Assay
- Related Substances and Residual Solvents
- Dissolution and Content Uniformity
- Polymorphic Quantification and Particle Size Distribution
- Elemental Impurities (Q3D) and Genotoxic Impurities

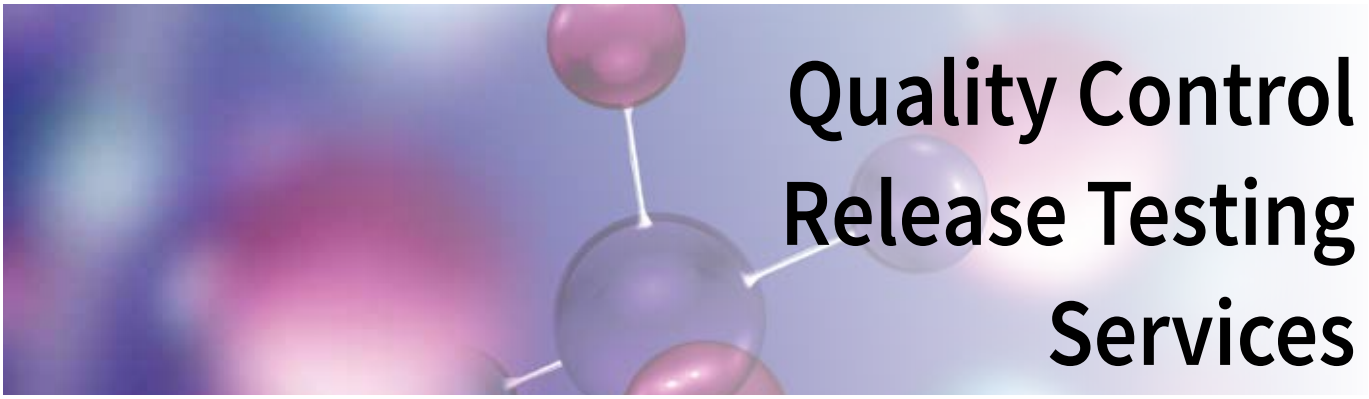
Techniques Utilized:

We employ advanced analytical techniques including chromatography (HPLC: UV, RI, FLD, PDA; UPLC; GC-HS: FID, ECD), mass spectrometry (GC-MS/MS, LC-MS/MS) and spectroscopy (ICPMS), Amino acid analyzer ensuring precise and reliable results for diverse pharmaceutical applications.

Testing Capabilities:

- Active Pharmaceutical Ingredients (APIs) / Drug Substances
- Drug Products: Tablets, Capsules, Ointments, Lotions, Syrups, Gels, Transdermal Patches, and more
- Raw Materials and Key Starting Materials (KSMs)
- Intermediates

Our expert solutions ensure reliable, compliant, and high-quality results tailored to your pharmaceutical needs.



Quality Control Release Testing Services

Quality control (QC) release testing ensures the safety, efficacy, and consistency of pharmaceutical products before they reach the market. Advanced analytical techniques help detect impurities, confirm composition, and ensure compliance with regulatory standards.

Key Analytical Techniques for QC Release Testing

Chromatographic Analysis (HPLC & GC):

- **High-Performance Liquid Chromatography (HPLC):** Used for precise separation and quantification of active pharmaceutical ingredients (APIs), impurities, and degradation products in various formulations.
- **Gas Chromatography (GC):** Ideal for analyzing volatile compounds, residual solvents, and impurities in drug substances and formulations.

Spectroscopic Analysis:

- **Ultraviolet (UV) Spectroscopy:** Used for qualitative and quantitative analysis of APIs and excipients based on their absorbance at specific wavelengths.
- **Mass Spectrometry (MS):** Helps in molecular identification, structure elucidation, and impurity profiling.

Analytical Testing for Various Dosage Forms:

- **Syrups:** Viscosity, pH, API concentration, and microbial contamination testing.
- **Gels & Creams:** Rheological properties, homogeneity, and stability assessments.
- **Patches:** Adhesion, drug content uniformity, and permeation testing.
- **Solid Orals (Tablets, Capsules):** Disintegration, dissolution, hardness, and uniformity evaluations.

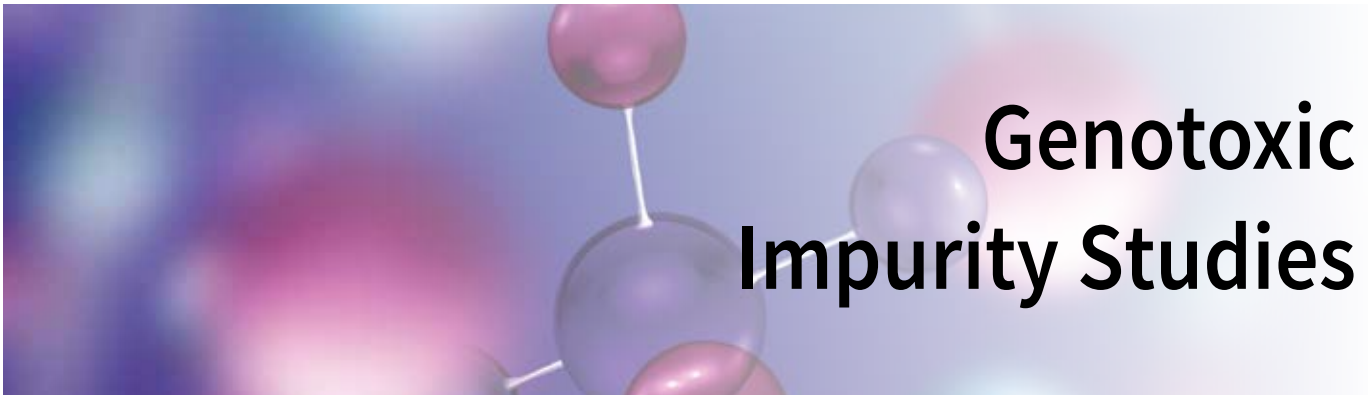
Trace Metal Analysis (ICP-MS):

- **Inductively Coupled Plasma Mass Spectrometry (ICP-MS):** Detects and quantifies trace levels of heavy metals (e.g., arsenic, cadmium, lead, mercury) to ensure compliance with ICH Q3D guidelines.

Genotoxic Impurities Determination:

- **LC-MS/MS (Liquid Chromatography-Mass Spectrometry):** Highly sensitive for detecting genotoxic impurities at trace levels, ensuring drug safety.
- **GC-MS/MS (Gas Chromatography-Mass Spectrometry):** Used for volatile and semi-volatile genotoxic impurity analysis, crucial for regulatory acceptance.

These advanced analytical methodologies play a vital role in pharmaceutical quality control, ensuring compliance with regulatory standards and delivering safe, effective medications to patients.



Genotoxic Impurity Studies

The synthesis of drug substances involves the use of various reactive chemicals, solvents, catalysts, and other processing aids. During chemical synthesis or subsequent degradation, impurities may be introduced into drug substances and their formulations.

Genotoxic impurities (GTIs) are DNA-reactive substances with the potential to induce genetic mutations, potentially leading to cancer, even at low levels. Therefore, regulatory authorities mandate strict testing and control of these impurities to ensure drug safety.

Our Genotoxic Impurity Study Services Include:

- Identification and quantification of genotoxic impurities as per **ICH M7 (R2), USFDA, EMA**, and specific customer requirements.
- Development, validation, and analysis of genotoxic impurities based on the allowable **maximum daily exposure (MDE) limits.**
- Advanced analytical techniques including: **GC-MS/MS, HS-GC-MS, LC-MS/MS, ICP-MS, HPLC, GC, and IC**

Testing Scope:

We conduct comprehensive genotoxic impurity studies for:

- **Active Pharmaceutical Ingredients (APIs) / Drug Substances**
- **Drug Products,** including but not limited to :
  - Tablets, Capsules
  - Ointments, Lotions, Creams
  - Syrups, Suspensions, Gels
  - Inhalations, Emulsions
  - Transdermal Patches

*Ensure compliance and safety with our **expert genotoxic impurity analysis**—tailored to meet regulatory standards and your specific needs*

CUSTOM SERVICE PLATFORM

Your experiments… Our expertise…

Cell culture experiments are time consuming, require premium quality resources and triplicate repetitions for obtaining statistically significant results. Seek our services for faster and accurate results.

CELLBIO®

Our Custom Testing Services provide you with a complete solution to make your experiments easier and faster, assuring you the accuracy and authenticity of results.

With more than a decade of experience in Animal Cell Culture, we possess a comprehensive array of premium quality media, reagents and kits. A team of competent scientists at our lab have optimized and validated numerous cell culture techniques. Equipped with high throughput automated instruments complying with the latest technology, we also have advanced analytical tools for statistical analysis of the experimental data. From a wide variety of cancerous cell lines, stem cells and primary cells, you can select the cell line of your choice depending on your experimental requirement!

Save your precious time… Depend on us…

FEATURES

- Validated method of analysis
- Save your time and resources
- Detailed statistical analysis and comprehensive report

Endotoxin Testing Services

Ensuring Product Safety & Regulatory Compliance Across Industries

At HiMedia Laboratories, we offer comprehensive endotoxin testing solutions to meet the highest industry standards, ensuring the safety and efficacy of pharmaceutical, bioprocessing, medical, and research products. Our highly sensitive and regulatory-compliant assays provide precise detection of bacterial endotoxins, protecting human health and product integrity.

Our Endotoxin Testing Applications

We provide endotoxin testing services for various industries, ensuring product safety and quality. Our expertise spans multiple sectors, including:

- **Pharmaceutical & Biologics** – Detection of endotoxins in injectable drugs, vaccines, and biologics.
- **Medical Devices** – Sterility validation for implantable devices, surgical tools, and dialysis equipment.
- **Bioprocessing & Cell Therapy** – Endotoxin Testing for cell culture media, growth factors, and biologics.
- **Water & Parenteral Solutions** – Routine testing of Water for Injection (WFI), dialysis fluids, IV fluids, ophthalmic solutions, and infusion therapies.
- **Research & Diagnostics** – Ensures endotoxin Testing for reagents, buffers, and diagnostic kits, enhancing accuracy in molecular biology, immunoassays, and experimental studies.
- **Food & Beverage Safety** – Endotoxin testing for probiotics, dietary supplements, fermentation-based products, dairy, and infant nutrition.

3D Cell Culture

Bringing Your 3D Cell Culture Research to Life

At HiMedia, we're passionate about making advanced 3D cell culturing accessible and customizable for researchers like you. Our **TRIVIMA™ bioprinter** is designed to handle intricate scaffold designs and diverse biomaterials, ensuring precision and flexibility in your bioprinting projects. Whether you're working in pharmaceuticals, tissue engineering, or academia, TRIVIMA adapts to your needs.

We also offer a carefully curated selection of biomaterials like Hi-GelMA™, Hi-Silk™, and Hi-dECM™, helping you create reliable, reproducible 3D cell cultures.

Need advanced imaging? Our STELLARIS 5 Confocal System captures every detail, while the CERO Bioreactor supports long-term spheroid and organoid cultures. For material characterization, the Discovery HR 10 Rheometer ensures precise rheological analysis.

Science is complex, but your tools don't have to be. Let's advance 3D cell culture together.

TRIVIMA Bioprinter

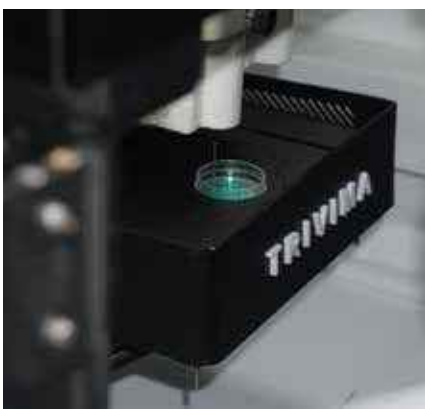
Affordable Bioprinting, Customized for You

The technology in TRIVIMA is fine tuned for the most intricate of scaffold designs and the most sensitive cell types. Our impeccable engineering and scientific advisory team, who have worked with multiple biomaterials and have troubleshoot complex engineering hurdles, will guide you through each and every step of your bioprinting process and work closely with you to fine tune complex scaffold architectures, suggest suitable biomaterials and even help you troubleshoot specific steps in your bioprinting protocols.

Our Bioprinter TRIVIMA manufactured by NBIL is designed not only for large pharmaceutical companies, but also for research institutes and schools interested in tissue engineering. Customization is essential in the global bioprinting ecosystem, particularly in India. Our bioprinter is designed to be completely customizable in order to meet the needs of the Indian research community.

Application

TRIVIMA has been tested across wide variety of biomaterials. Whether you are planning to print with a skin tissue specific bionk or a bioceramic for your bone based application, TRIVIMA can print it all.



CHOOSE FROM A WIDE VARIETY OF INTERCHANGEABLE PRINTHEADS

PNEUMATIC PRINTHEAD (4°C to 80°C)

Fine tuned over years of applications across a wide and diverse range of polymers and biomaterials, TRIVIMA's pneumatic printheads can take on almost most materials used in bioprinting.

INKJET PRINTHEAD (Ambient to 80°C)

From Picolitre Dispension to 700 microlitre dispension, TRIVIMA's inkjet printheads are truly made for diverse inkjet bioprinting and printing applications and are also temperature controlled

MELT EXTRUSION HEAD

TRIVIMA's stainless steel melt extrusion heads allow you to work with diverse pellet based printing applications. This head allows you to widen your approach to the use of a range of synthetic polymers by reaching a temperature of 250 ° C.

CUSTOMIZABLE PRINTHEAD

As per user's request

CERO

A Benchtop Incubator & Bioreactor

Meet a brand-new device for your cells.

+ Spheroids + Organoids + iPS Cells + Primary Cells +

Less Workload	Automated procedures, standardized protocols, walk-away oprations
Simple & Convenient Process	Time saving, long-term cultures, cost-effective, better diffusion, accelerated maturation
Consistent Results & High Yield	More mature cells & relavent cells for various applications

Prof. Dr. Heikenwälder, Chronic Inflammation and Cancer, Deutsches Krebsforschungszentrum (DKFZ), Heidelberg, Germany

"Cultivating hepatocyte spheroids in CERO considerably improves expansion, differentiation, maturation and hepatic virus infection compared to monolayer culture. Our research takes advantage from healthy cells even from long-term cultures in CERO. Moreover, we are now able to perform 3D long-term culture of human tissue specimen in CERO - a paradigm shift."

All spheroid images by T Riedl, A Keric, M Heikenwälder Chronic Inflammation and Cancer (F180), Deutsches Krebsforschungszentrum (DKFZ), Heidelberg, Germany 2OLS, OMNI Life Science GmbH & Co. KG

Healthy long-term cultures (2 – 3 months) of spheroids. CERO optimizes nutrient exchange with the medium and provides high biomass of mature cells.

Confocal Imaging Services

About the STELLARIS 5 Confocal Imaging System

The **STELLARIS 5** is a state-of-the-art imaging system developed by Leica Microsystems. It features a fully motorized inverted microscope platform with innovative technologies that set new standards in image quality and data acquisition. The system is equipped with the following key components:

Objectives: 4x, 10x, 20x, 40x, 63x (oil)

Laser Lines: Continuous Wave Lasers: 405 nm, 448 nm, 514 nm, 561 nm, 638 nm.

Detectors: Integrated Power HyD S detectors for higher photon detection efficiency, extremely low dark noise, and sensitive spectral detection from 410 to 850 nm.

Services Offered

1. **High-Resolution Multicolor Imaging**
   Capture detailed images of fixed biological samples labeled with multiple fluorescent dyes or markers
2. **Multicolor Imaging with Z-Stacking**
   Generate high-resolution multicolor images with depth information through z-stacking of fixed biological samples.
3. **3D Culture Imaging**
   Obtain high-resolution images of 3D cultures such as spheroids and organoids, revealing their complex structures.
4. **Time-Lapse Live Cell Imaging**
   Perform dynamic imaging of live cells with fluorescent tags to study cellular processes over time.
5. **FRET Microscopy**
   Utilize Fluorescence/Förster Resonance Energy Transfer to analyze protein-protein or molecular interactions.
6. **FRAP Microscopy**
   Conduct Fluorescence Recovery After Photobleaching experiments to study molecular diffusion or dynamics within cells or membranes.
7. **Super-Resolution Imaging**
   Achieve enhanced resolution using the advanced Lightning module for detailed visualization of biological samples.
8. **Automated Stitching/Tile Scanning**
   Image large fluorescently tagged biological samples with precision through automated tile scanning and stitching.
9. **Image Analysis Using LAS X Software**
   Analyze images with Leica's advanced LAS X software for robust data interpretation.
10. **3D Reconstruction and Volume Rendering**
    Perform comprehensive image analysis including 3D reconstruction and volume rendering for in-depth studies.
11. **Assistance in Sample Preparation**
    Receive expert guidance and support in preparing samples for optimal imaging outcomes.
12. **Intensity-Based Analysis**
    Quantify fluorescence intensity for comparative studies or signal evaluation.
13. **Co-Localization Analysis**
    Analyze spatial overlap and interaction between multiple fluorescent markers.

Contact us today to learn more about our confocal imaging capabilities and how we can support your research projects.

Rheological Testing Services

About the Discovery HR 10 Rheometer

The Discovery HR 10 Rheometer, part of the TA Instruments Discovery Hybrid Rheometer family, is renowned for its precision and reliability. Designed for a wide range of viscosity and viscoelastic measurements, this advanced instrument ensures accurate results through its user-friendly software and hardware. Key features include:

Geometries: 0°, 8 mm Parallel Plate, 0°, 20 mm Parallel Plate, 2°, 20 mm Cone and Plate

The HR 10 is optimized for studying solutions, dispersions, and polymeric materials under controlled environmental conditions, offering valuable insights into material properties.

Services Offered

1. **Viscosity/Flow Resistance Measurement at Various Shear Rates**
   Analyze how the viscosity of a material changes with different shear rates.
2. **Viscosity/Flow Resistance Measurement at Different Temperatures**
   Determine the temperature-dependent viscosity behavior of a material.
3. **Viscoelastic Property Measurement**
   Measure the elasticity (storage modulus) and viscosity (loss modulus) of materials to understand their viscoelastic properties.
4. **Time-Dependent Flow Behavior**
   Study how the flow behavior of a material evolves over time.
5. **Yield Stress Measurement**
   Identify the minimum stress required for a material to begin flowing.
6. **Thixotropy Testing**
   Evaluate the time-dependent recovery of viscosity after a material undergoes shear.
7. **Gelation Profile Analysis**
   Characterize the temperature-dependent flow behavior of materials during gelation.
8. **Shear-Dependent Gelation Studies**
   Investigate how shear affects the gelation process of materials.
9. **Creep and Recovery Testing**
   Assess a material's deformation and recovery under applied stress over time.
10. **Data Analysis Using TRIOS Software**
    Perform comprehensive data analysis and visualization with advanced TRIOS software.

CELLBIO

CELL BIOLOGY

TRIVIMA 3D-Bioprinter

Precision Bioprinting Assured.

Discover the future of bio-fabrication with Trivima Bioprinters, developed by Next Big Innovation Labs® in collaboration with HiMedia Laboratories. Designed to adapt to your research needs, Trivima Bioprinters combine advanced technology with unmatched support to bring your bioprinting aspirations to life.

Whether you're exploring basic tissue architectures, developing novel biomaterials, or printing complex, multi-cellular structures, the Trivima series offers tailored solutions to empower your breakthroughs.

TYPES

TRIVIMA BASIC

Compact bioprinter with dual extruders, ideal for basic tissue and bone-cartilage applications.

TRIVIMA ADVANCED

Versatile triple-extruder system for soft tissue printing and co-axial applications.

TRIVIMA PRO

High-capacity bioprinter with multi-material compatibility for complex tissue and organoid printing.

INNOVATE. PRINT. TRANSFORM.

Cell Culture Platform

The introduction of cell culture methodology to the biological sciences ushered in a new era of rapid and exciting advances in the fields of virology, cytology, drug discovery, toxicology, cancer and stem cell research and therapy. Our comprehensive portfolio in cell culture platform includes classical media, sera, cell culture reagents, cell culture supplements and many more.

Media : HiMedia's core expertise lies in manufacturing cell culture media, both in powdered as well as liquid form, for mammalian and insect cell. Comprehensive design of experiments, rigorous raw material qualification and media production with no manual intervention using automated liquid handling platform and automatic filling line are our strengths that enable us to provide the widest range of cell culture media.

Customized Media : It has been our endeavor to help researchers with their specific requirements related to media and cell culture reagents. We provide customized products as per the unique requirements of the customer in terms of : media formulations, packaging, labeling, documentation (e.g. certificates of origin, BSE/ TSE risk statements) and additional QC testing (e.g. cell culture testing, mycoplasma detection, amino acid profiling). We are firmly committed to maintain the confidentiality of your project and we sign a confidentiality agreement to ensure that the integrity of your project is not compromised.

Specialized Media : HiMedia offers media, reagents, and supplements that are specifically formulated to deliver clear, reproducible results. Each media has been designed and optimized for the analysis of peripheral blood lymphocytes, amniotic fluid cells, chorionic villus samples and bone marrow cells respectively.

Transport System : Simplify collection, transport, maintenance and frozen storage of viruses, chlamydia, mycoplasma and ureaplasma specimens with the HiViral™ Transport Media and Swab.

HiSep™ Lymphocyte Separation Media

HiSep™ Lymphocyte Separation Media are sterile, ready to use, density gradient media for isolating viable mononuclear cells from human blood and other animal species. They are made up of a polymer of sucrose with high synthetic molecular weight. Mononuclear cells (lymphocytes and monocytes) and platelets are contained in the banded plasma-LSM interphase due to their density and the pellet that is formed contains mostly erythrocytes and granulocytes, which have migrated through the gradient to the bottom of the tube.

PRODUCTION

Manufactured in GMP, ISO 13485 and ISO 9001 certified facility

CERTIFICATION

CE Marked for IVD (98/79/EC)

YIELD

95 ± 5% mononuclear cells

3 ± 2% granulocytes

More than 90% viability

Purity by Flow Cytometry

Quality of the lymphocyte separation medium depends solely on the purity of isolated lymphocytes with minimal granulocyte contamination. Because of the diversity of populations comprising PBMCs, flow cytometry represents the best method for studying functional and phenotypical properties of these cells. Each lot of LSM is rigorously tested for its ability to isolate pure population of lymphocytes by analyzing forward and side scatters. Forward scatter (FSC) correlates with cell size and side scatter (SSC) is proportional to the granularity of the cells.

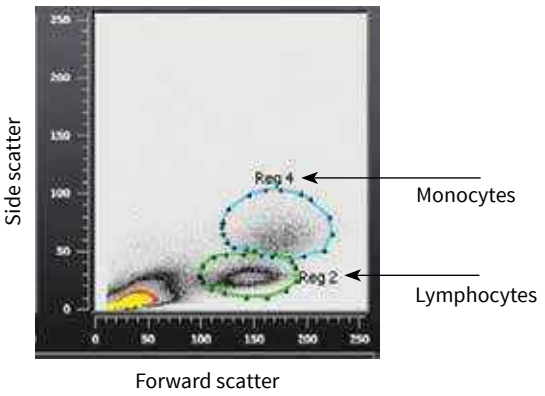

Fig 1 : PBMCs sample analyzed on flow cytometer showing lymphocytes and monocytes gated population based on forward scatter (FSC) and side scatter (SSC).

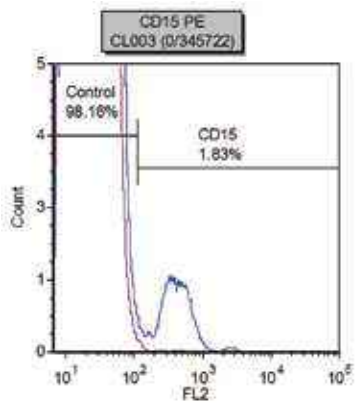

Fig 2 : Purity of each batch is tested using flow cytometry and staining for $CD15^+$ cells.

Viability by Automated Cell Counter CASY

More than 90% viability of separated cells is determined by electronic cell counter CASY based on membrane potential of cells and trypan blue exclusion test on hemocytometer.

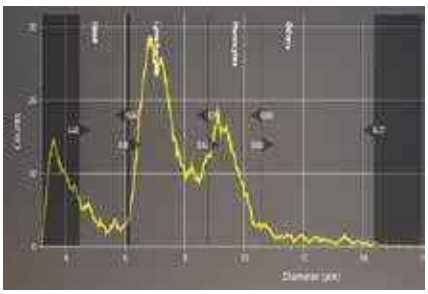

Fig 3 : PBMCs sample analyzed on CASY (electronic cell counter) showing lymphocytes and monocytes gated population based on diameter (µm) and cell counts.

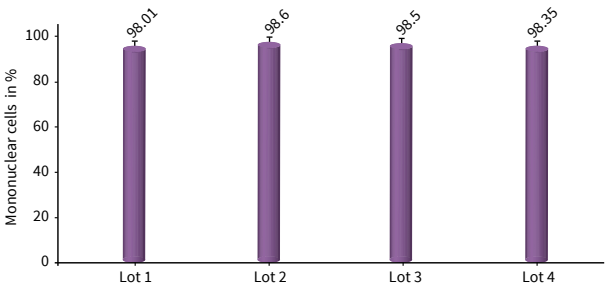

Fig 4 : Consistent performance of different lots of LS001 with respect to purity of isolated PBMCs

Applications

Immunology research

- Isolation of various immune cells subtypes and their functional studies
- Study of cell signaling pathway
- Cytokines research based on cell- cell/ pathogen infection
- Cell proliferation assay and cytokines profiling

Clinical research

- Regenerative therapy
- Cancer immunotherapy
- HLA therapy

Diagnostics

- Autoimmune disease
- Identification of various hematological malignancies and infectious diseases

DMSO-Dextran Solution

DMSO (55%) USP and Dextran-40 (5%)

USP Mixture 6ml mixture prepared in WFI grade water and filled in USP type I glass vials

DMSO-based formulations play a critical role in the cryopreservation of stem cells and blood components, maintaining their viability during freezing. TCL741 is a 6 ml mixture comprising 55% DMSO USP and 5% Dextran-40 USP, prepared in WFI-grade water and filled in USP Type I glass vials. This formulation is specifically designed for the efficient cryopreservation of cord blood stem cells.

Why Choose Us

+ Indigenous product with advanced auto-filling technology

+ Cost-effective solution tailored for your needs

+ Capability to produce GMP-grade solutions using our GMP-certified production facility

DMSO/Dextran Solution

Trusted by cord blood banks worldwide for cryopreservation solutions

Available in Vials

FREEZin1™

Animal origin-free and serum-free cell freezing media

TCL098

FREEZin1™ is a chemically defined, serum free cell freezing medium designed to freeze the cells grown in serum free and animal component free conditions ensuring high cell viability upon revival from cryo-storage

Universal freezing medium suitable for stem cells, primary cells, serum free cells & sensitive cell line

WHY FREEZIN1™ STANDS OUT?

SERUM-FREE & ANIMAL COMPONENT-FREE
Ensures safe and reliable cell preservation.

SUPERIOR POST-THAW VIABILITY
Ensures over 85% viability for serum-free adapted cells

UNIVERSAL APPLICATION
Ideal for cryopreserving mammalian cells, stem cells, and primary cells.

READY-TO-USE
Saves time and eliminates the need for in-house freezing media preparation

FREEZE YOUR CELLS WITH CARE

CryoLITE™

Chemically Defined, DMSO free formulation for cryopreservation of your most precious cells

TCL285

CryoLITE™ chemically defined, DMSO free, serum free cell freezing medium is intended to freeze the cells grown in serum free and animal component free conditions

Universal freezing medium suitable for stem cells, primary cells, serum free cells & sensitive cell line

WHY CRYOLITE™?

DMSO-Free, Safer for Cells

Eliminates DMSO-associated cytotoxicity and differentiation interference, preserving cell integrity and function

Chemically Defined & Xeno-Free

Ensures consistency, reproducibility, and regulatory compliance with a fully defined composition, free from animal-derived components.

Ideal for MSCs & Primary Cells

Eliminates DMSO-associated cytotoxicity and differentiation interference, preserving cell integrity and function

Superior Post-Thaw Viability & Recovery

Enhances cell survival and proliferation post-thaw, reducing stress and apoptosis compared to DMSO-containing cryoprotectants.

PROTECT YOUR CELLS,

ELIMINATE DMSO TOXICITY !

HiAmnioXL™

Amniocyte Karyotyping Medium

AL202A

For accurate prenatal cytogenetic analysis, HiAmnioXL™ Medium is a specialized solution for culturing human amniotic fluid cells and chorionic villi samples. Optimized for robust cell growth, it ensures high-quality metaphase chromosome spreads, essential for reliable diagnoses. Pre-supplemented with serum, glutamine, and antibiotics, HiAmnioXL™ is supplied frozen, streamlining the culture process while maintaining optimal cell propagation.

WHY HiAmnioXL™ STANDS OUT?

Optimized for Cytogenetics

Supports robust growth of amniotic fluid and chorionic villus cells for accurate prenatal diagnostics

Ready-to-Use & Quality Assured

Pre-supplemented with serum, glutamine, and antibiotics; rigorously tested for sterility, pH, osmolality, and cell growth.

High Manufacturing Standards

Produced under ISO 13485 and cGMP guidelines for reliable quality.

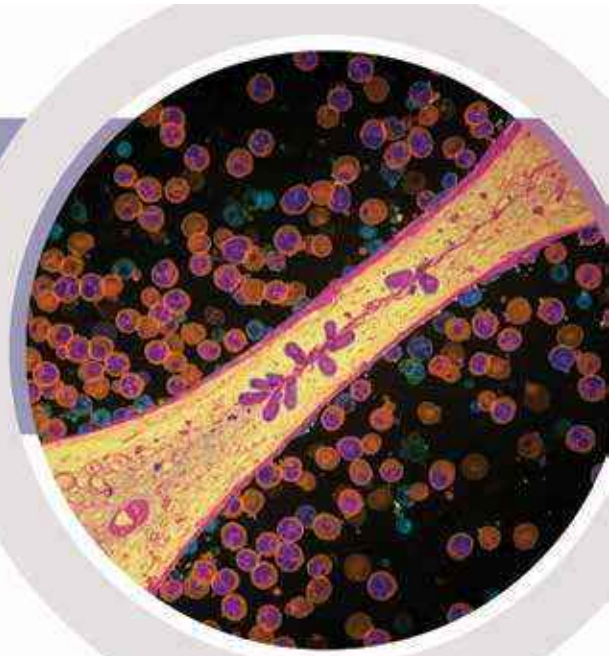
Convenient & Stable

Frozen storage (-20°C) ensures a 24-month shelf life.

OPTIMIZED MEDIA FOR AMNIOCYTE KARYOTYPING & DIAGNOSTIC ACCURACY

HiMarrowXL™

Bone Marrow Karyotyping Medium



AL301A

Tired of the complexities and inconsistencies of traditional karyotyping methods? Introducing HiMarrowXL™ Type Karyotyping Medium, a streamlined, ready-to-use solution designed to simplify and optimize your bone marrow chromosome analysis. Our expertly formulated medium eliminates the need for tedious preparation steps, allowing you to focus on what matters most: accurate and efficient results.

WHY HiMarrowXL™ STANDS OUT?

Ready-to-Use

No prep work, just thaw and culture!

Optimized for Bone Marrow

Formulated for optimal cell growth and analysis

Consistent and Reliable Results

Stringent quality control for reproducible outcomes.

Long Shelf Life and Easy Storage

24-month shelf life and convenient frozen storage

BECAUSE AN ACCURATE DIAGNOSIS CAN SAVE A LIFE !

Cytogenetic Insights:

Sample Collection
1

Draw blood into a 15ml centrifuge tube containing anticoagulant to prevent clotting

- Heparin- **TCL129**
- EDTA- **TCL189**
- Centrifuge Tube- **TCP105H**

2 Cell Culture

Culture cells in HiKaryoXL™ medium and incubate to facilitate optimal cell growth and division.

- Media w/ mitotic stimulator- **AL165A, AL169A, AL249A**
- Media w/o mitotic stimulator- **AL173A, AL185A**
- Mitotic Stimulators- **TCL061 & TCL071**
- Balanced Salts- **TL1006, TL1010**
- Consumables Plasticware - **TCS2,TCS4 TCS6**
- Incubator- **AI005**

Mitotic Inhibition
3

Add Mitotic Inhibitor to arrest the cells in metaphase for efficient chromosome analysis.

- Mitotic Inhibitors: **TCL062, TCL074 & TCL133**

Peripheral Blood Karyotyping Workflow

Use a hypotonic solution to spread the chromosomes and fix them with Carnoy's fixative (a methanol and acetic acid mixture) to maintain structural integrity.

- Potassium Chloride Solution: **TC010**

Examine the stained slide under a light microscope to observe chromosome spread.

- Microscope: **AI003B**

Drop fixed cells onto a slide and stain with Giemsa chromosomal stain for observation.

- Trypsin Solution for G-Banding: **TCL122**
- Gurr Buffer Solution pH 6.8: **TL1139**
- Giemsa Stain Solution: **TCL083**
- Hoechst 33258-**TC225**
- DAPI dihydrochloride- **TC229**

CELLBIO

Karyotyping Solutions

HiKaryoXL™, HiMarrowXL™ & HiAmnioXL™: Streamline your cytogenetic analysis with our ready-to-use media.

Welcome to a new era in cytogenetics. Our karyotyping media are designed to simplify and enhance your genetic analysis, providing you with the tools you need to make accurate diagnoses and gain deeper insights into genetic information.

HiKaryoXL™, HiMarrowXL™, and HiAmnioXL™ are specifically formulated for peripheral blood, bone marrow, and amniotic fluid cells, respectively, offering convenience and reliability for your cytogenetic studies.

Viral Transport Media & Kits

HiViral™ Transport Media

Antibacterial and antifungal agents prevents bacterial and fungal contamination
Avoids drying up of the sample
Allows long survival of the present virus
Prevents the growth of other bacteria and fungi present in the specimen
Stabilizes the viruses and offers maximum recovery

Swabs

SUITABLE FOR NASOPHARYNGEAL, NASAL OR TRACHEAL SAMPLES

Patient Friendly Design : Ergonomic design and soft texture for maximum yield. Improves patient comfort and specimen collection
Uptake and Transfer : Quantitative measurement and improved test sensitivity
Release : Spontaneous elution of sample into liquid media
Applications : Rapid antigen testing, EIA, molecular-based assays, DFA, cytology testing, bacteriology and virology culture

Manufactured in GMP, ISO 13485 and ISO 9001 Certified facility

CE Marked for IVD (98/79/EC)

Guaranteed Functionality, Sensitivity and Specificity

Designed according to WHO Directive (Annex 8) and ICMR guidelines

Validated by reputed Indian Institutes such as NIV and ICMR

Validated by European, Middle Eastern and Hong Kong authorities

CELLBIO

Swabs

Nasopharyngeal Nylon Flocked Swab

Breakpoint at 89mm from tip — PW1172

Oropharyngeal Viscose Swab

Available without & with breakpoint (breakpoint at 80mm, 65mm & 30mm from tip) — PW043/B/C/D

COVID*Safe*™
Virus Inactivation Medium

INACTIVATE... AND BE COVID*Safe*™ !

COVID*Safe*™ is a stabilization, inactivation and transportation medium designed for potentially infectious viruses in suspected samples.

Specially designed for molecular testing, it rapidly inactivates pathogen infectivity and minimizes risk of accidental disease spread

Advantages

Safety

Risk of accidental spillage/ exposure increases in case of any pandemic, where large volume of samples are collected and handled. On-the-spot inactivation of samples minimizes such risks of accidental spread of disease.

Ease of handling

Due to inactivation, sample virulence is lost and samples can be processed under Biosafty Level II.

Easy and economical transport

Samples can be stored and shipped at ambient temperature, thereby, eliminating the need of cold chain maintenance and reducing shipping/ packing costs.

Storage and shelf life

Store at room temperature, away from bright light. Use before date of expiry given on the product label.

Sample collected can be stored at:

Ambient Temperature	08 Days
2 – 8°C	15 Days
-20°C	1 Month
-80°C	1 Year

On-spot inactivation of viral virulence

Risk-free sample handling

Biosafety level III Not required
